[Radiopharmaceutical Extravasations: Impact on Patients, Providers, Payers,](#)

[Radiation Safety, Research, and Regulations](#) Medhat M. Osman, David Townsend, Ronald Keith Lattanze, 2025-12-19

Radiopharmaceutical extravasations have been present since the beginning of nuclear medicine While there has been a significant increase in interest over the past five years regarding these extravasations there is minimal understanding of the issue Furthermore there is little published information on radiopharmaceutical extravasations compared to chemotherapy contrast CT and other pharmaceutical extravasations As the energy emissions of routinely administered diagnostic radiopharmaceuticals have and continue to evolve in nuclear medicine over the past five decades and as more and more radiotherapeutics enter the market there is a need educate all stakeholders on this important topic Most nuclear medicine facilities do not proactively monitor the quality of their radiopharmaceutical administrations Because radiopharmaceutical administrations usually involve small volumes and do not cause a burning sensation and because injection sites are not routinely included in the imaging field of view many extravasations can go unnoticed Since large diagnostic radiopharmaceutical extravasations and most radiotherapeutic extravasations can result in high absorbed doses to healthy tissue and can compromise the intended nuclear medicine procedure our goal is to increase awareness of this topic As nuclear medicine facilities increase their understanding of this pernicious administration error and take appropriate steps to prevent extravasations patient care will improve
