Artificial Intelligence and Society Dr. R. B. Konda, Dr.

Mahesh M. Ganwar, Prof. Kaveri Kori, Dr. Hanmanthappa Sedamkar, Dr. Manikamma S., Dr. Saibanna. & Dr. Mitradevi Halimani, 2024-11-08 The integration of AI powered e gamified modules in education has significantly impacted students' scientific attitudes and academic achievement in science. This study investigates how AI driven gamification enhances engagement, critical thinking and problem solving skills leading to improved academic performance. AI enables personalized learning experiences by adapting to individual student needs thus fostering a more interactive and learner centered approach. E gamified modules provide immediate feedback motivating students to correct errors and reinforce learning. The main aim of the study is to find out whether there is any significant difference between pre test post test mean scores of secondary school students taught with and without AI powered e gamified modules in science. 80 Samples were chosen by employing purposive sampling technique. The researcher has used standardized PhET simulation modules. The results show that the post test mean scores of the experimental group are significantly different than that of the control group. The study suggests that when students are exposed to AI powered gamified learning environments they develop a more positive disposition toward scientific methods and show measurable improvements in performance. This research highlights the potential of AI in transforming traditional education by making learning more dynamic, personalized and effective thereby fostering a deeper understanding of science and its applications.
