**Questioning Causality** Rom Harré, Fathali M. Moghaddam, 2016-01-25

Covering a topic applicable to fields ranging from education to health care to psychology this book provides a broad critical analysis of the assumptions that researchers and practitioners have about causation and explains how readers can improve their thinking about causation

In virtually every laboratory research center or classroom focused on the social or physical sciences today the concept of causation is a core issue to be questioned tested and determined

Even debates in unrelated areas such as biology law and philosophy often focus on causality

What made that happen

In this book experts from across disciplines adopt a reader friendly approach to reconsider this age old question in a modern light defining different kinds of causation and examining how causes and consequences are framed and approached in a particular field

Each chapter uses applied examples to illustrate key points in an accessible manner

The contributors to this work supply a coherent critical analysis of the assumptions researchers and practitioners hold about causation and explain how such thinking about causation can be improved

Collectively the coverage is broad providing readers with a fuller picture of research in social contexts

Beyond providing insightful description and thought provoking questioning of causation in different research areas the book applies analysis of data in order to point the way to smarter more efficient practices

Consequently both practitioners and researchers will benefit from this book
