Shipbreaking: Hazards and Liabilities Michael Galley, 2014-07-15. Most of the world's redundant ships are scrapped on the beaches of the Indian subcontinent, largely by hand. As well as cargo residues and wastes, ships contain high levels of hazardous materials that are released into the surrounding ecology when scrapped. The scrapping process is labour-intensive and largely manual; injuries and death are commonplace. Ship breaking was a relatively obscure industry until the late 1990s. In just 12 years, action by environmental NGOs has led to the ratification of an international treaty targeting the extensive harm to human and environmental health arising from this heavy polluting industry. It has also produced important case law. Attempts to regulate the industry via the Basel Convention have resulted in a strong polarization of opinion as to its applicability, and various international guidelines have also failed because of their voluntary nature. The adoption of the Hong Kong Convention in 2009 was a serious attempt to introduce international controls to this industry.

A Guide to International Disarmament Law Stuart Casey-Maslen, Tobias Vestner, 2019-05-24. Disarmament is integral to the safeguarding and promotion of security, development, and human rights. Hundreds of millions of dollars are spent each year on disarmament operations, yet no comprehensive guide exists to explain clearly the international rules governing disarmament. This book seeks to fill that gap. It describes the international legal rules that govern disarmament and the operational, political, and technical considerations that govern their implementation. This book aims to support compliance, implementation, and further development of international disarmament law. Traditionally, disarmament focused on weapons of mass destruction. This remains a critically important area of work. In recent decades, the scope of disarmament has broadened to encompass also conventional weapons, including through the adoption of rules and regulations to govern arms transfers and measures to eliminate specific munitions from stockpiles and to destroy explosive remnants of war. There have also been four generations of programmes to address small arms and light weapons at national or sub-national level through disarmament, demobilisation, and reintegration (DDR) programmes during and following the end of armed conflict. While an internationally accepted definition of disarmament does not yet exist, it is widely agreed that disarmament encompasses or interrelates with prohibitions and

restrictions on the development production stockpiling testing and transfer of weapons and on their destruction In addition to clarifying these elements chapters of this guide will also consider the relationship between disarmament and the law of armed conflict and with the United Nations Security Council human security public health and non state actors **Moody's**
