Financial Forecasting

This model demonstrates the analysis of uncertainty in a financial forecast. Imagine you are deciding whether to launch a new product line. A simplified analysis of the cash flow activity of this venture might look as shown below. Since most of the elements of the model involve the prediction of future events, they all involve uncertainty. The values in cells in green have all been calculated using @RISK formulas. The cells in red, the NPV value in cell C10 and the NPV distribution in cell C11 are all marked as @RISK outputs so a detailed analysis can be performed. By adding @RISK distributions to your financial models, you can go beyond simple what-if analysis that can lead to bad business decisions.
