If you love games and want to learn how to make them but have no idea where to begin then this course is built just for you. This learning path is divided into three modules which will take you on an incredible journey of creating games. The course begins with getting you started with programming behaviors in C# so that you can create 2D games in Unity. You will begin by installing Unity and learning about its features. You will learn how to perform object-oriented programming and discover how to manage the game play loop, generate game levels and develop a simple UI for the game. By the time this module comes to a close you will have mastered the art of applying C# in Unity. It is now time we put into use what we learned in the previous module into reality as we move onto the second module. Here we will be building 7-8 action-packed games of different difficulty levels. Each project will focus on key Unity features as well as game strategy development. This module will mark your transformation from an application developer to a full-fledged Unity game developer. Who wouldn't love a game that is fully perfect, functional and without any glitches? The third module deals with just that by teaching how to enhance your game by learning game optimization skills. Here you'll gain an understanding of possible solutions to any problem and how to implement them. You will then learn everything you need to know about where performance bottlenecks can be found, why they happen and how to work around them. With this massive wealth of knowledge at the end of this learning path you will be able to leverage an array of game development techniques to create your own basic games while resolving any issues that you encounter. Style and approach: This learning path should be treated as the complete package necessary for building games. It is a step-by-step guide to develop a game from scratch by applying the fundamentals of C# and Unity scripting with a reference guide in the end to solve all your gaming problems.
