**Developments in Soil Classification, Land Use Planning and Policy Implications** Shabbir A. Shahid,Faisal K. Taha,Mahmoud A. Abdelfattah,2013-02-15 As the world s population continues to expand maintaining and indeed increasing agricultural productivity is more important than ever though it is also more difficult than ever in the face of changing weather patterns that in some cases are leading to aridity and desertification The absence of scientific soil inventories especially in arid areas leads to mistaken decisions about soil use that in the end reduce a region s capacity to feed its population or to guarantee a clean water supply Greater efficiency in soil use is possible when these resources are properly classified using international standards Focusing on arid regions this volume details soil classification from many countries It is only once this information is properly assimilated by policymakers it becomes a foundation for informed decisions in land use planning for rational and sustainable uses *Maryland Conservationalist* ,1925 **Why Conservation Is Failing and How It Can Regain Ground** Eric T.
