## **Supergenes What Really Makes Us Human:**

*Supergenes* Craig MacKay, 2007-12-19 Why do we behave so differently in different situations Why did you choose the clothes you are wearing the books you read and the friends and opinions you have What is it about humans that has let us achieve so much so quickly This book tries to understand why the evolution of our human species is happening at a rate so much faster than may be explained by Darwinian biological evolution alone The engine of our extraordinary social evolution is human behaviour We have a deep seated need to pass on to others some part of our own achievements what we have made of our lives Our survival and success now depends principally on our adaption to our social environment and not to our physical environment It is these supercharged social genes that are the essence of our remarkable and accelerating rate of evolution today This book looks critically at our present understanding of human behaviour and evolution to seek a consilience across a wide range of fields of research More at [www.supergenes.net](http://www.supergenes.net) **The Knowledge Gene** Lynne

Kelly, 2024-09-03 Drawing on a major discovery with tremendous implications an Australian researcher uncovers the source of human creativity and learning in the functioning of a supergene she calls the knowledge gene Over 500 000 years ago a single gene mutated It spread over time becoming critical in the journey that transformed our earliest ancestors into fully modern humans capable of navigating the entire planet and beyond A few thousand years ago humans started outsourcing knowledge to writing displacing art and music from the heart of learning This is the extraordinary story of a gene that makes us uniquely human Dr Lynne Kelly recounts how a widespread congenital disorder was the critical clue she and her collaborators needed to identify this gene as the supergene that has long eluded researchers into human cognition The knowledge gene supercharged our ability to learn and share knowledge with others explaining the prodigious memories of Indigenous people the world over The knowledge gene unlocks many other puzzles too It explains for the first time why humans are the only species to make art offers new insights into the earliest music and storytelling and discusses the cognitive strengths of neurodivergent people The Knowledge Gene shows that we can all access the full power of our memories without giving up any of the advantages of writing and technology The implications for learning and creativity at any age are profound At last here is the Big Picture about what it really means to be human Professor Margo Ngawa Neale A rollicking ride through the strange and wonderful world of how humans attained the ability to learn store and transmit vast amounts of information Professor Bruno David A thought provoking book on human evolution emphasising the critical role of creativity and art throughout our history Professor Alan Harvey *Science Digest*, 1982 **The Economist**, 1975
