Superlight Rethinking How Our Homes Impact The Earth:

Superlight Phyllis Richardson, 2014 One of the most powerful design philosophies of recent years has been architect Glenn Murcutt's notion that buildings should touch the earth lightly. Today, climate change, new materials, and restricted land use have given fresh impetus to find lightweight solutions for our dwellings. The 40 houses gathered here by Phyllis Richardson, author of the highly successful XS series and Nano House, show us that buildings can weigh less and have minimal impact on their environments and that this lightness, visual, material, ecological, can create beautiful, ethereal homes that offer new, natural modes of habitation and greater communion with our surroundings. Lori Ryker, 2005 *Off the Grid* confronts the ecological and cultural problems associated with the way we get and use energy and explains how it is possible to live in a beautifully designed home using much less, no matter where your home is located. Our homes are connected by a nearly invisible grid of infrastructure that binds us together. It is a system of electrical poles, wire, substations, hydroelectric dams, telecommunication towers, and water extraction and sewage systems. From within this system, we work, play, and raise families. We have also created one of the greatest environmental challenges known to modern civilization. The signs of our impact upon the world can be recognized in the reports of environmental changes occurring across the earth, and they can also be seen in the growing failures of the energy grids across the world as the current system is stressed beyond its capacity. Technologies that can be used to live off the grid: geothermal energy, use of wind turbines, photovoltaic arrays, micro hydropower, rainwater collection, and reclamation, and more are explained as author Lori Ryker shows how to choose and incorporate these sources according to geography and climate. *Off the Grid* beautifully illustrates that this is not just a concept for rural living; examples of homes that are off the grid to varying degrees are found in New York City, Ontario, Canada, Stuttgart, Germany, Belmont, California, Pipe Creek, Texas, Clyde Park, Montana, Twin Lakes, Minnesota, Laytonville, California, Venice, California, and New South Wales, Australia. *Off the Grid* shows how we can take responsibility for our future choices and conveniences now and proves that off the grid living is a concept that can be easily understood and adopted by everyone, regardless of where you live or how much money you make. Lori Ryker grew up in Texas and has lived and worked in a variety of locations including Boston, New York City, Portland, and Basel, Switzerland. She now resides in Livingston, Montana, where she teaches in the School of Architecture at Montana State University and is a partner along with Brett W. Nave of Ryker Nave Design. Their work has been published in *The House You Build* and *Western Interiors and Design*. Ryker holds a MArch from Harvard Graduate School of Design and a Ph.D. from Texas A.M. University. She is the author of *Mockbee Coker Thought and Process*. [Homes for a Changing Climate](#)

Will Anderson, 2009-10-14 An exploration into the history of our collective response to the challenges of extreme weather conditions and climate. At the beginning of the twenty-first century, the world finally woke up to the reality of climate change and began the arduous task of freeing itself from dependence on fossil fuels. But the time lag in the Earth's ecosystem is such that our best efforts to cut carbon today will

make little difference to the changing climate of the next 30 years As we work towards a secure low carbon future we must address the changes that are already taking place in the planet s climate We must learn to live with higher temperatures intense rainstorms rising sea levels and prolonged drought We must also confront the secondary impacts of climate change especially on energy and food security Britain has a mild temperate climate where occasional weather extremes tend to have serious impacts because we are simply not prepared for them Yet across the world communities have been living with such extremes for millennia If we have the imagination to learn from others and rethink the ways we build and live together we can face this unsettling future with confidence Homes for a Changing Climate celebrates this collective wisdom exploring traditional and contemporary responses to the challenges of climate and illustrating the many ways in which houses can be designed built and adapted to cope with these challenges Examples are drawn from across Europe including the supervolcano of Thera the 100mph winds of the Western Isles and the cutting edge eco building projects in Britain Based on the climate projections for the UK published by the Met Office in June 2009 Homes for a Changing Climate combines inspiring case studies striking photography and practical advice to create a book of imagination and hope in uncertain times

Sustainable Homes Ewan McLeish,2007 What is a sustainable home Why does most of the water we use at home get flushed down the toilet What color is the electricity in your home How does working from home add to sustainability From using sustainable building materials to cooking more efficiently Sustainable Homes looks at the impact our homes have on the environment and on our quality of life Discover what sustainable living means and what you can do to make your home more sustainable Book jacket Simple Sustainable Homes Tim Pullen,2008 A sustainable home is one that minimises its impact on the planet in terms of the materials it s built from the energy and resources used in its construction and the energy and resources used by the people living in it This book will show readers how to design a sustainable home and explain which approaches make the best commercial and environmental sense
