**Supernumerary Intelligence** John W. Dickey,Ian A. Birdsall,G. Richard Larkin,Kwang Sik Kim,2015-02-04 This book explores supernumerary intelligence SI combining quantitative and qualitative analysis It introduces Quantitative CyberQuest QCQ and the Public Administration Genome Project PAGP as tools to understand SI using statistics systems analysis research methodology qualitative research and AI     **Plan Prediction** Ray Wyatt,2016-11-19 This book develops an innovative system in the form of an app that harnesses the power of the internet to predict which sorts of people will prefer which policy in ANY planning situation It chronicles the accumulated research wisdom behind the system's reasoning along with several less successful approaches to policy making that have been found wanting in the past including the myth usually peddled by strategic planners that it is possible to find a best plan which optimally satisfies everybody The book lays out an entirely new kind of Planning Support System PSS It will facilitate decision making that is far more community sensitive than previously and it will drastically improve the performance of anyone who needs to plan within socially sensitive contexts which is all of us A standout feature of the system is its commitment to scientific rigour as shown by its predicted plan scores always being graphically presented within error margins so that true statistical significance is instantly observable Moreover the probabilities that its predictions are correct are always shown a refreshing change from most if not all other Decision Support Systems DSS that simply expect users to accept their outputs on faith alone
