Supply Chain Management Based On Sap Systems:

Supply Chain Management Based on SAP Systems Gerhard F. Knolmayer, Peter Mertens, Alexander Zeier, 2012-11-02 In recent years Supply Chain Management SCM has become one of the most widely discussed issues on top management's agenda. One essential precondition for the implementation of SCM concepts are powerful information systems. Many manufacturing companies deploy the logistics modules of the SAP R/3 system. In 1997 SAP enlarged its focus beyond Enterprise Resource Planning (ERP) systems and started an SCM initiative which resulted in the Advanced Planner and Optimizer (APO) system. Today APO has become one of the main components of the mySAP.com solutions. This book describes the principles and methods of intra and inter company SCM with reference to Release 4.6 of the SAP R/3 and to Release 3.0 of the SAP APO system. It also discusses potential future developments of these widely used software systems. The final chapter of the book contains an annotated overview of the most valuable online resources dealing with SCM. **Supply**

Chain Management Based on SAP Systems Gerhard F. Knolmayer, Peter Mertens, Alexander Zeier, Jörg Thomas Dickersbach, 2009-02-11 Supply Chain Management (SCM) is not a buzzword like many others in management and IT; it is here to stay. Megatrends such as globalization and increasing specialization result in a complex division of labor at national and international levels. Lean and agile supply chains have become a major management target, and the interorganizational coordination of business processes has become highly relevant. The complexity of today's supply chains cannot be mastered without the support of powerful information systems. SAP has established itself as the market leader in this type of IT systems. The book describes SCM using a pyramidal framework and relates it to the SAP SCM Solution Map. Desired features of IT support for SCM are formulated, and the extent to which SAP systems provide these features is shown. We describe the functionalities of SAP APO in detail, present case studies on implementing and running SAP SCM systems, and discuss SCM aspects of the new SAP Business ByDesign approach. Supply Chain Planning Hans-Otto Günther,Herbert Meyr,2009-03-05 In recent years supply chain planning has emerged as one of the most challenging problems in the industry As a consequence the planning focus is shifting from the management of plant specific operations to a holistic view of the various logistics and productionstages that is an approach in which suppliers productionplants and customers are considered as constituents of an integrated network A major driving force behind this development lies in the globalization of the world economy which has facilitated the co operation between different partners working together in world wide logistics networks Hence considerable cost savings can be gained from optimizing the structure and the

operations of complex supply networks linking plants suppliers distribution centres and customers Consequently to improve the performance of the entire logistic chain more sophisticated planning systems and more effective decision support are needed Clearly successful applications of supply chain management have driven the development of advanced planning systems APS which are concerned with supporting decision making activities at the strategic tactical and operational decision level These software packages basically rely on the application of quantitative methods which are used to model the underlying complex decision problems considering the limited availability of resources and the need to react on time to customer orders The core module at the mid term level of APS comprises operational supply chain planning In many industries production stages are assigned to different plants and distribution centres have been established at geographically dispersed locations
