Surface Acoustic Wave Devices in Telecommunications Ken-Ya Hashimoto,2013-04-17 Although the existence of the surface acoustic wave SAW was first discussed in 1885 by Lord Rayleigh 1 it did not receive engineering interest for a long time In 1965 the situation changed dramatically White suggested that SAWs can be excited and detected efficiently by using an interdigital transducer IDT placed on a piezoelectric substrate 2 This is because very fine IDTs can be mass produced by using photolithography which has been well developed for semiconductor device fabrication and proper design of the IDT enables the construction of transversal filters with outstanding performance Then in Europe and America a vast amount of effort was invested in the research and development of SAW devices for military and communication uses such as delay lines and pulse compression filters for radar and highly stable resonators for clock generation Research activities are reflected in the various technical papers represented by special issues 3 5 and proceedings 6 The establishment of design and fabrication technologies and the rapid growth of digital technologies represented by the microcomputer meant that the importance of SAW devices for the military decreased year by year and most researchers in national institutions and universities left this field after reductions or cuts in their financial support Then the end of the Cold War forced many SAW researchers in companies to do so too

Surface acoustic wave SAW devices are widely used in mobile communications a rapidly evolving market This book gives an overview on the latest SAW technologies with an emphasis on the design and simulation of devices such as resonator based devices employing the SH type leaky SAW

### Surface Acoustic Wave Devices for Mobile and Wireless Communications,

Four-Volume Set Colin Campbell,1998-06-17 Written for readers with or without surface acoustic wave SAW experience this book covers a wide range of SAW filter and device design techniques as well as applications to mobile and wireless circuitry It provides numerous references and worked examples on SAW devices to highlight various design aspects and contains illustrations from many leading electronic companies around the world The first half of the book covers the principles of SAW devices The second half focuses on applications to the mobile wireless field including SAW devices for antenna duplexers RF and IF filters for cellular cordless phones front end filters for wireless transceivers fixed and tunable oscillators filters for on board satellite communications as well as coding and convolvers for indoor outdoor spread spectrum communications

Surface Acoustic Wave Devices for Mobile and Wireless Communications serves as an excellent sourcebook for engineers and designers with some SAW background or for technical staff with no prior knowledge of SAW devices who need to know how this technology can help their products It can be used as a textbook for senior and graduate students engaged in the study of signal processing techniques and systems for mobile communications Key Features First SAW text applied to mobile and wireless communications Written by an award winning researcher with over 20 years of SAW device experience Presents the theory and design of major SAW devices for mobile wireless communications as applied to some of the major

telecommunication standards Accessible to both engineering and scientific readers with or without prior SAW device knowledge *Surface Acoustic Wave Filters* David Morgan,2010-07-27 Surface Acoustic Wave Filters gives the fundamental principles and device design techniques for surface acoustic wave filters It covers the devices in widespread use today bandpass and pulse compression filters correlators and non linear convolvers and resonators The newest technologies for low bandpass filters are fully covered such as unidirectional transducers resonators in impedance element filters resonators in double mode surface acoustic wave filters and transverse coupled resonators using waveguides The book covers the theory of acoustic wave physics the piezoelectric effect electrostatics at a surface effective permittivity piezoelectric SAW excitation and reception and the SAW element factor These are the main requirements for developing quasi static theory which gives a basis for the non reflective transducers in transversal bandpass filters and interdigital pulse compression filters It is also needed for the reflective transducers used in the newer devices A thorough revision of a classic on surface acoustic wave filters first published in 1985 and still in print Uniquely combines easy to understand principles with practical design techniques for all the devices in widespread use today Complete coverage of all the latest devices which are key to mobile phones TVs and radar systems Includes a new foreword by Sir Eric Albert Ash *Advances in Surface Acoustic Wave Technology, Systems and Applications* Clemens C. W. Ruppel,Tor A. Fjeldly,2001 Surface acoustic wave SAW devices are recognized for their versatility and efficiency in controlling and processing electrical signals This has resulted in a multitude of device concepts for a wide range of signal processing functions such as delay lines filters resonators pulse compressors convolvers and many more As SAW technology has found its way into mass market products such as TV receivers pagers keyless entry systems and cellular phones the production volume has risen to millions of devices produced every day At the other end of the scale there are specialized high performance signal processing SAW devices for satellite communication and military applications such as radar and electronic warfare This volume together with Volume 2 presents an overview of recent advances in SAW technology systems and applications by some of the foremost researchers in this exciting field
