### Review of the Specifications and Features of Different Smartphones Models Dr. Hidaia Mahmood

Alassouli,2021-10-13 A smartphone is a portable device that combines mobile telephone and computing functions into one unit. It is a cellular telephone with an integrated computer and other features not originally associated with telephones such as an operating system, web browsing, multimedia functionality, the ability to run software applications along with core phone functions such as voice calls and text messaging. Smartphones typically contain a number of metal oxide semiconductor (MOS) integrated circuit IC chips, which include various sensors that can be leveraged by pre-installed and third-party software such as a magnetometer, proximity sensors, barometer, gyroscope, accelerometer, and more, and support wireless communications protocols such as Bluetooth, Wi-Fi, or satellite navigation.
