The Growing Spine Behrooz A. Akbarnia, George H. Thompson, Muharrem Yazici, Ron El-Hawary, 2022-02-03 There has been significant progress in the field of spinal disorders in very young children over the past two decades. However, the treatment of such conditions remains challenging due to the age of the patient, different etiologies, associated morbidities, and the progressive nature of the deformity. Depending on the etiology of the deformity, these children are often cared for by multiple specialists, including pediatricians, pulmonologists, pediatric orthopedists, or orthopedic spine surgeons, pediatric surgeons, pediatric neurosurgeons, neurologists, and oncologists. Health professionals in all of the mentioned disciplines are involved in the management of these patients, which is why compiling a comprehensive text that is not limited to orthopedic specialists is essential. Since the second edition of this book was published, there has been a significant body of literature that has been published, and advances made in the care of young children with spinal and thoracic deformities. This new edition will effectively help to standardize the care of these patients. Furthermore, other professionals such as nurses, physical therapists, and healthcare professionals in training are usually not familiar with these conditions and are in need of a reference book to consult when caring for young children with spinal deformities. Sections are arranged thematically and comprise a comprehensive presentation of the current knowledge on disorders of the growing spine. After opening sections discussing general considerations and patient evaluation and diagnosis, subsequent sections describe the various categories of spinal deformity: idiopathic, congenital, neuromuscular, syndromic, and others, followed by surgical and non-surgical management strategies.

both traditional and growth friendly Concluding sections address patient care and outcomes and outline future directions for research and practice Advances in Paediatric Spine Surgery Federico Solla,Luigi Aurelio Nasto,2024-06-21 The always evolving field of pediatric spine surgery has seen tremendous advancements in recent years Improvements in surgical planning techniques implants and peri operative pathways have greatly benefited our patients and their families

Nevertheless there are still many questions to be answered and there is room for improvement Modern technologies including vertebral body tethering VBT patient specific strategy self growing rods minimally invasive robotic assistance and surgical navigation are active areas of investigation Similarly enhanced recovery after surgery ERAS protocols as well as newer strategies for peri operative management are promising tools to hasten recovery after surgery This Special Issue focuses on idiopathic and neuromuscular scoliosis surgery with a special interest in new technologies new surgical techniques and peri operative management protocols
