

# THE HISTORY OF SUSTAINABILITY

## 17TH CENTURY

By this time, the natural environment was being altered by humans, mostly air and water pollution - and deforestation in Europe.

## 500 BC

Ancient authors shared concerns of environmental degradation by humans, and suggested less harmful practices.

## 1800s

The industrial revolution brought an increase in anxiety and discussions about overconsumption of natural resources by scholars and citizens.

## POST WWII

The world began facing major environmental issues. The discourse transformed from a focus on pollution to global concern about the survival of the human race, its future generations, and planet.

## 1970s

The sustainability movement accelerated globally: the first Earth Day, a rise in environmental activism, the first UN conference, and many pieces of legislation. The word *sustainability* began being used, but in many different contexts.

## 1980s - NOW

The UN Brundtland Commission definition of *sustainable development* became the most regarded in the sustainability movement. Businesses began using sustainability as a selling point. But sustainability is now used ambiguously and even deceptively, all while climate change worsens.

R.

McNeill,2001-04-17 One of those rare books that s both sweeping and specific scholarly and readable What makes the book stand out is its wealth of historical detail Elizabeth Kolbert The New Yorker The history of the twentieth century is most often told through its world wars the rise and fall of communism or its economic upheavals In his startling book J R McNeill gives us our first general account of what may prove to be the most significant dimension of the twentieth century its environmental history To a degree unprecedented in human history we have refashioned the earth s air water and soil and the biosphere of which we are a part Based on exhaustive research McNeill s story a compelling blend of anecdotes data and shrewd analysis never preaches it is our definitive account This is a volume in The Global Century Series general editor Paul Kennedy     The Turning Points of Environmental History Frank Uekötter,2010-11-21 From the time when humans first learned to harness fire cultivate crops and domesticate livestock they have altered their environment as a means of survival In the modern era however natural resources have been devoured and defiled in the wake of a consumerism that goes beyond mere subsistence In this volume an international group of environmental historians documents the significant ways in which humans have impacted their surroundings throughout history John McNeill introduces the collection with an overarching account of the history of human environmental impact Other contributors explore the use and abuse of the earth s land in the development of agriculture commercial forestry and in the battle against desertification in arid and semi arid regions Cities which first appeared some 5 500 years ago have posed their own unique environmental challenges including dilemmas of solid waste disposal sewerage disease pollution and sustainable food and water supplies The rise of nation states brought environmental legislation which often meant selling off natural resources through eminent domain Perhaps the most damaging environmental event in history resulted from a perfect storm of effects cheap fossil fuels especially petroleum and the rapid rise of personal incomes during the 1950s brought an exponential increase in energy consumption and unforseen

levels of greenhouse gasses to the earth's atmosphere. By the 1970s the deterioration of air, land and water due to industrialization, population growth and consumerism led to the birth of the environmental and ecological movements. Overall the volume points to the ability and responsibility of humans to reverse the course of detrimental trends and to achieve environmental sustainability for existing and future populations. **The Great Acceleration** J. R. McNeill, Peter Engelke, 2016-04-04. The pace of energy use, greenhouse gas emissions and population growth has thrust the planet into a new age, the Anthropocene. Humans have altered the planet's biogeochemical systems without consciously managing them. The Great Acceleration explains the causes, consequences and uncertainties of this massive uncontrolled experiment.

History of Environmental Economic Thought Erhun Kula, 1997-12-11. This volume presents the key ideas of major figures in economics throughout history, covering issues such as population growth, resource scarcity and environmental contamination.
