Sustainable Ecosystems And The Built Environment:

Sustainable Ecosystems Guy Battle,Christopher McCarthy,2001-12-18 The authors of this text explore a range of technical advances and recent discoveries to heighten the awareness of architects and designers about environmentally friendly features which could be incorporated into architectural and urban design **Sustainable Urban Environments**
Ellen M. van Bueren,Hein van Bohemen,Laure Itard,Henk Visscher,2011-09-15 The urban environment buildings cities and infrastructure represents one of the most important contributors to climate change while at the same time holding the key to a more sustainable way of living The transformation from traditional to sustainable systems requires interdisciplinary knowledge of the re design construction operation and maintenance of the built environment Sustainable Urban Environments An Ecosystem Approach presents fundamental knowledge of the built environment Approaching the topic from an ecosystems perspective it shows the reader how to combine diverse practical elements into sustainable solutions for future buildings and cities You ll learn to connect problems and solutions at different spatial scales from urban ecology to material water and energy use from urban transport to livability and health The authors introduce and explore a variety of governance tools that support the transformation process and show how they can help overcome institutional barriers The book concludes with an account of promising perspectives for achieving a sustainable built environment in industrialized countries Offering a unique overview and understanding of the most pressing challenges in the built environment Sustainable Urban Environments helps the reader grasp opportunities for integration of knowledge and technologies in the design construction and management of the built environment Students and practitioners who are eager to look beyond their own fields of interest will appreciate this book because of its depth and breadth of coverage **Materials for a Healthy, Ecological and Sustainable Built Environment**

Emina K. Petrović,Brenda Vale,Maibritt Pedersen Zari,2017-03-23 Principles for Evaluating Building Materials in Sustainable Construction Healthy and Sustainable Materials for the Built Environment provides a comprehensive overview of the issues associated with the selection of materials for sustainable construction proposing a holistic and integrated approach The book evaluates the issues involved in choosing materials from an ecosystem services perspective from the design stage to the impact of materials on the health of building users The three main sections of the book discuss building materials in relation to ecosystem services the implications of materials choice at the design stage and the impact of materials on building users and their health The final section focuses on specific case studies that illustrate the richness of solutions that existed before the rise of contemporary construction and that are consistent with a sustainable approach to creating built environments These are followed by modern examples which apply some if not all of the principles discussed in the first three sections of the book Provides a holistic and integrated approach to the issues associated with the selection of materials for sustainable construction Provides a thorough understanding of ecosystem services based on ecology research for built environment design Provides an original review of the impact of

materials on human health Provides case studies to illustrate the points above **Building Ecology** Peter Graham,2009-02-12 Buildings consume 40% of our planet's materials and 30% of its energy Their construction uses up to three million tonnes of raw materials a year and generates 20% of the solid waste stream If we want to survive our urban future there is no option but to build in ways which improve the health of ecosystems Understanding the concept of ecological sustainability and translating it into practice as sustainable development is a key challenge for today's built environment professionals The skill and vision of those who shape our cities and homes is vital to achieving sustainable solutions to the many environmental economic and social problems we face on a local national and global scale Peter Graham offers here a holistic view of ecologically sustainable building by drawing on established areas of knowledge demonstrating their relevance to the environmentally conscious building professional and putting the process product and impact of building into context Case studies illustrate how sustainable principles have been applied successfully and discussion topics are offered to stimulate thought Building Ecology will help planners surveyors designers and builders to incorporate sustainability into their everyday practice by showing which styles of building are ecologically sustainable providing fundamental knowledge for making decisions using the principles of ecologically sustainable building explaining a complex subject in a clear balanced way Building Ecology sets out the current scientific view of how nature works and how buildings link with and affect nature It provides fundamental knowledge for building in harmony with nature and keeping Earth's life supporting ecosystems healthy Regenerative Urban Design and Ecosystem Biomimicry Maibritt Pedersen

Zari,2018-05-20 It is clear that the climate is changing and ecosystems are becoming severely degraded Humans must mitigate the causes of and adapt to climate change and the loss of biodiversity as the impacts of these changes become more apparent and demand urgent responses These pressures combined with rapid global urbanisation and population growth mean that new ways of designing retrofitting and living in cities are critically needed Incorporating an understanding of how the living world works and what ecosystems do into architectural and urban design is a step towards the creation and evolution of cities that are radically more sustainable and potentially regenerative Can cities produce their own food energy and water Can they be designed to regulate climate provide habitat cycle nutrients and purify water air and soil This book examines and defines the field of biomimicry for sustainable built environment design and goes on to translate ecological knowledge into practical methodologies for architectural and urban design that can proactively respond to climate change and biodiversity loss These methods are tested and exemplified through a series of case studies of existing cities in a variety of climates Regenerative Urban Design and Ecosystem Biomimicry will be of great interest to students professionals and researchers of architecture urban design ecology and environmental studies as well as those interested in the interdisciplinary study of sustainability ecology and urbanism *Building Materials for Sustainable and Ecological Environment* Varenyam Achal,Chee Seong Chin,2021-05-28 This book uses theories hypotheses policies practical insights and

case studies to introduce and elucidate green building materials for sustainable construction Cement is the most widely used building material in construction however it is not sustainable being responsible for 7% of global carbon dioxide emissions and consuming huge quantities of energy In order to limit the ecological damage sustainable building materials are needed Ecosystems are a source of important lessons and models for transitioning the built environment onto a sustainable path that opens options for sustainable building material in construction The book provides a guide for readers seeking knowledge on sustainable building materials with the potential to lower environmental impact by reducing CO2 emission throughout the building s lifecycle The book is motivated by recent rapid advances in sustainable building materials production including green building materials made of industrial by products and recycled wastes earth materials plant based materials microbial based materials or supplementary cementitious materials to reduce the environmental impacts of traditional building materials Discussing the development and applications of various sustainable building materials including related case studies and addressing the environmental issue with a holistic and systematic approach that creates an ecology of construction for sustainability in infrastructures it offers promising solutions to achieve renewable and sustainable building materials for the future

Climate Change Adaptation in the Built Environment Chamindi Malalgoda,Dilanthi Amarasinghe,Haigh,Shavindree Nissanka,Nishara Fernando,Ruben Paul Borg,Mo Hamza,2025-05-02 Global climate change is one of the greatest environmental threats facing humanity and it is affecting every country on every continent Recent evidence confirms a close liaison between climate change induced hazards and the built environment as the built environment demonstrates a high fragility and vulnerability to hazardous situations The impact of climate change is particularly pertinent to the built environment given the life expectancy of buildings and the fact that it is essential to adapt the existing built environment to deal with a climate that may be significantly different from that in which it evolved Coastal regions are highly vulnerable to climate change because in addition to changes in temperature precipitation and more frequent flooding they will be affected by rising sea levels wave heights and accelerated coastal erosion The built environment exerts considerable influence over coastal communities local climate and environment Coastal areas also tend to be highly populated with many vulnerable urban centres located near the coastal belt In addressing such challenges it is important to better understand the impacts of climate change on the built environment and to develop tangible climate adaptation measures for the built environment

Design with the Desert Richard Malloy,John Brock,Anthony Floyd,Margaret Livingston,Robert H. Webb,2016-04-19 Typical development in the American Southwest often resulted in scraping the desert lands of the ancient living landscape to be replaced with one that is human made and dependent on a large consumption of energy and natural resources This transdisciplinary book explores the natural and built environment of this desert region and introduces development tools for shaping its future in a more sustainable way It offers valuable insights to help promote ecological balance between nature and the built environment in the American Southwest and in other ecologically fragile regions around the world

Architecture and Systems Ecology William W. Braham, 2015-08-11 Modern buildings are both wasteful machines that can be made more efficient and instruments of the massive metropolitan system engendered by the power of high quality fuels A comprehensive method of environmental design must reconcile the techniques of efficient building design with the radical urban and economic reorganization that we face Over the coming century we will be challenged to return to the renewable resource base of the eighteenth century city with the knowledge technologies and expectations of the twenty first century metropolis This book explores the architectural implications of systems ecology which extends the principles of thermodynamics from the nineteenth century focus on more efficient machinery to the contemporary concern with the resilient self organization of ecosystems Written with enough technical material to explain the methods it does not include in text equations or calculations relying instead on the energy system diagrams to convey the argument Architecture and Systems Ecology has minimal technical jargon and an emphasis on intelligible design conclusions making it suitable for architecture students and professionals who are engaged with the fundamental issues faced by sustainable design The energy systems language provides a holistic context for the many kinds of performance already evaluated in architecture from energy use to material selection and even the choice of building style It establishes the foundation for environmental principles of design that embrace the full complexity of our current situation Architecture succeeds best when it helps shape accommodate and represent new ways of living together *Sustainable Built Environment - Volume II* Fariborz Haghigat, Jong-Jin Kim, 2009-11-10 Sustainable Built Environment is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Environmental conservation and technological innovation are two principal forces that drive the building industry toward the future Technological innovation offers many opportunities to make buildings more dynamic and comfortable and occupants more comfortable and productive The necessity of environmental conservation on the other hand compels all types of developments and human activities to be environmentally responsive The content of the Theme on Sustainable Built Environment is organized with state of the art presentations covering several topics Urban Design Emerging Issues in Building Design Environment Energy and Health in Housing Design Culture Management Strategies and Policy Issues in the Sustainable Built Environment Using Technology to Improve the Quality of City Life Urban and Regional Transportation which are then expanded into multiple subtopics each as a chapter These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Saving The Planet By Design Ken Yeang, 2019-10-08 Can we save the Planet For a resilient durable and sustainable future for human society we need to repurpose reinvent redesign remake and recover our human made world so that our built environment is benignly and seamlessly biointegrated with Nature to function synergistically with it These are the multiple tasks that humanity must carry

out imminently if there is to be a future for human society and all lifeforms and their environments on the Planet Addressing this is the most compelling question for those whose daily work impacts on Nature such as architects engineers landscape architects town planners environmental policy makers builders and others but it is a question that all of humanity needs to urgently address Presented here are two key principles as the means to carry out these tasks ecocentricity being guided by the science of ecology and ecomimesis as designing and making the built environment including all artefacts based on the emulation and replication of the ecosystem concept Designing with ecology is contended here as the authentic approach to green design from which the next generation of green design will emerge going beyond current use of accreditation systems For those who subscribe to this principle this is articulated here showing how it can be implemented by design Adopting these principles is fundamental in our endeavour to save our Planet Earth and changes profoundly and in entirety the way we design make manage and operate our built environment
