Sustainable Energy Routledge Explorations In Environmental Economics:

Sustainable Energy Klaus D. John, Dirk Rübbelke, 2010-10-18 Rising fuel prices during recent years and the threat of global warming have reinforced public and scientific interest in the issue of sustainable energy with the term sustainability understood as having economic environmental and social dimensions Renewable energy is seen as an effective means to address several problems simultaneously including climate change exploitation of non renewable resources the high volatility of energy prices on the global markets dependency on fuels from politically unstable countries energy insecurity and the transfer of wealth to these countries This book addresses these and related topics including the diffusion of renewable technologies Policies to induce sustainable energy use and production are discussed by researchers from a range of different disciplines The result is a use oriented and multidisciplinary perspective concerning policies to support sustainable energy use and production which will be of great use to researchers and academics alike [The Economics of Renewable Energy in the Gulf](#) Hisham M. Akhonbay, 2018-09-27 The Cooperation Council for the Arab States of the Gulf GCC has been at the epicenter of global energy markets because of its substantial endowment of hydrocarbons Yet countries in the region have also stated their intent to be global leaders in renewable energy This collection explores the drivers for the widespread adoption of renewable energy around the GCC the need for renewable energy and the policy economic factors that can create success All six countries within the GCC have plans to include renewable energy power generation in their energy mix for various reasons including a growing demand for electricity because of increasing populations an increasing government fiscal deficit due to inefficient subsidies the need to diversify the economy and global pressure to meet climate change requirements However the decision of when and by how much to introduce renewable energy is fraught with complications In this book a stellar cast of regional policy and academic experts explore the reasons behind these renewable energy plans and the potential impediments to success whether it be the declining cost of producing energy from hydrocarbons an infrastructure which needs to be updated social acceptance lack of financing and even harsh weather Weighing up all these factors the book considers the route forward for renewable energy in the Gulf region *The Economics of Renewable Energy in the Gulf* offers an excellent examination of the adoption of renewable energy in the area It will be of great interest to academic researchers and policy makers alike particularly those working in the areas of energy economics public policy and international relations **Renewable Energy from Forest Resources in the United States** Barry David Solomon, Valerie A. Luzadis, 2009 This book is particularly relevant to areas of study such as energy and forestry economics It will also appeal to renewable energy specialists foresters and ecological economists Jacket [Non-Market Valuation in South Asia](#) Mohammad Bhatt, 2025-02-04 This book provides a comprehensive exploration of the challenges and issues concerning the economic valuation of natural resources The authors present methods and tools that can help in designing policies and frameworks for the sustainable use of natural resources This is followed by an exploration of the use and non use values

provided by environmental resources as well as reviewing the current environmental valuation techniques Furthermore the authors use meta analysis to explore a range of South Asia based case studies including India and Bangladesh Using this empirical evidence they detail the various imperfections challenges and prospects in the area of management and allocation of environmental resources conservation of environmental biodiversity and sustainability This book will serve as a useful reference for academics and analysts in developed and developing countries working in the areas of environmental economics green economics and sustainable development It is also intended to encourage practitioners and managers in industry to deepen and expand upon their theoretical and practical understanding of the prevailing challenges associated with enhancing ecosystem services improved solid waste management and restoring biodiversity of environmental resources

Low Carbon Transition in Emerging Economies Erkin Erdoğan,2023-09-15 Many emerging economies are on the front line of the devastating impacts of global warming such as desertification and extreme weather events but for historical and political reasons they follow ambitious growth targets with seemingly little concern for climate change and environmental degradation Focusing on the case of Turkey this book investigates the economic impacts of possible climate change policies to help meet the required mitigation targets and transition to a low carbon economy In order to reach net zero targets by 2050 in compliance with the Paris Agreement Turkey must introduce policies that promote low carbon investments green jobs and low carbon employment more broadly This book explores the empirical evidence on the effectiveness of a carbon pricing mechanism by developing an econometric vector autoregression VAR model to analyse key data sets This time series analysis provides insights on a macro level dealing with aggregate data in which the role and complexity of micro interferences disappear allowing for the discovery of patterns and changes over time Thus the book contributes to the literature on methodology by arguing that time series analysis is one of the best fitting approaches to estimate possible impacts of climate change policies on an economy Additionally the results of the model are compared and contrasted with similar data from other emerging economies to identify potential common policy solutions between countries at a similar stage of development This book is vital reading for researchers interested in climate policy the economics of climate change and environmental economics

Sustainable Finance and the Global Health Crisis Pasquale Marcello Falcone,Edgardo Sica,2023-08-01 The speed with which the various economies recover from the Covid 19 pandemic will significantly determine the economic pressure placed on the environment in the medium to long term Furthermore the pandemic has highlighted the strong interrelations between natural and societal systems with societal resilience depending on a resilient environmental support system In this context the book argues that the pandemic represents a wake up call for financial systems to be better prepared for the climate crisis and social risk and has provided a stimulus to scale down the reliance of the global economy on fossil fuels The first part of the book provides a deep and creative discussion between leading international researchers and experts on the policy options and financial instruments which can help to catalyze the green

finance transition in the post Covid 19 era The contributions show that sustainable finance is emerging as a powerful tool to advance the transition towards a more environmentally and socially sustainable economic model Instruments such as sovereign green bonds green securities and other sustainability related securities can play a significant role in the post Covid 19 world to fund economic stimulus and to lead the way to new and more sustainable future The second part of the book supports the debate by highlighting a number of selected case studies on financing transitions in different regional contexts including Africa Asia Europe and Latin America The book marks a significant contribution to the literature on environmental economics and finance climate change and sustainability transitions Chapter 12 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Carbon-Neutral Pathways for China: Economic Issues Kai Tang, 2022-10-17 This book provides comprehensive economic analyses on the paths to net zero for China It gives a detailed overview of issues and challenges related to carbon neutrality of the global largest emitter which have not been adequately addressed e.g. reduction costs and efficiency of existing actions the multiple impacts of the newly established carbon market and the potentials and costs of nature based solutions such as biophysical sequestration etc Studies on China's carbon reduction have attracted scientists and policymakers from diverse backgrounds Pursuing a holistic and systematic approach the book establishes a fundamental framework for this topic emphasizing the importance of integrated technical economic policy analysis This book will not only be an essential reference to the carbon neutral progress in China but also will be an outstanding text book on carbon neutral management Similarly this book is expected to attract a great range of readership including undergraduate and postgraduate students economic and climate specialists researchers and policymakers in China as well as in overseas

Concepts and Instruments for a Rational Bioenergy Policy Alexandra Purkus, 2016-06-21 This book provides an in depth economic analysis of the challenges associated with bioenergy use and production Drawing on New Institutional Economics and the theory of economic policy it develops theory based recommendations for a bioenergy policy that strives for efficiency and sustainability Further it shows how to deal with diverse uncertainties and constraints such as institutional path dependencies transaction costs multiple and conflicting policy aims and interacting market failures while also applying the resulting theoretical insights to a case study analysis of Germany's bioenergy policy As such the book aims to bridge the gap between practical bioenergy policymaking on the one hand and neoclassical theory based concepts that strictly focus on a minimization of greenhouse gas mitigation costs on the other

Sustainability Challenges in Sub-Saharan Africa I Alexandros Gasparatos, Abubakari Ahmed, Merle Naidoo, Alice Karanja, Kensuke Fukushi, Osamu Saito, Kazuhiko

Takeuchi, 2020-09-04 The aim of this 2 volume book is to highlight how Sustainability Science approaches can help solve

some of the pervasive challenges that Africa faces The volumes collect a number of local case studies throughout Africa that adopt transdisciplinary and problem oriented research approaches using methodologies from the natural and the social sciences These are put into perspective with chapters that introduce key sustainability challenges such using a regional focus Through this multi scale and inter transdisciplinary approach the proposed volume will provide an authoritative source that will pack in a single volume a large amount of information on how Sustainability Science approaches sustainability challenges in African contexts While there have been general books about sustainability science none has had a strong African focus As a result the 2 volume set fills a major gap in the Sustainability Science scholarship This volume sets the stage for the series Part I introduces key sustainability challenges in Africa Parts II III highlights specific case studies related to these challenges from West and Central Africa

Arctic Oil and Gas Aslaug Mikkelsen, Oluf Langhelle, 2008-08-18 Pt 1 The Arctic context framework and methodology pt 2 Legal and institutional framework case studies pt 3 Comparisons and managerial implications

The Green Economy in the Gulf Mohamed Abdel Raouf, Mari Luomi, 2015-07-30 Filling a void in academic and policy relevant literature on the topic of the green economy in the Arabian Gulf this edited volume provides a multidisciplinary analysis of the key themes and challenges relating to the green economy in the region including in the energy and water sectors and the urban environment as well as with respect to cross cutting issues such as labour intellectual property and South South cooperation Over the course of the book academics and practitioners from various fields demonstrate why transitioning into a green economy a future economy based on environmental sustainability social equity and improved well being is not an option but a necessity for the Gulf Cooperation Council GCC States Through chapters covering key economic sectors and cross cutting issues the book examines the GCC states quest to align their economies and economic development with the imperatives of environmental sustainability and social welfare and proposes a way forward based on lessons learned from experiences in the region and beyond This volume will be of great relevance to scholars and policy makers with an interest in environmental economics and policy

Nuclear Power, Economic Development Discourse and the Environment Manu Mathai, 2013-01-17 Nuclear power is often characterized as a green technology Technologies are rarely if ever socially isolated artefacts Instead they materially represent an embodiment of values and priorities Nuclear power is no different It is a product of a particular political economy and the question is whether that political economy can helpfully engage with the challenge of addressing the environmental crisis on a finite inequitable and shared planet For developing countries like India who are presently making infrastructure investments which will have long legacies it is imperative that these investments wrestle with such questions and prove themselves capable of sufficiency greater equality and inclusiveness This book offers a critique of civilian nuclear power as a green energy strategy for India and develops and proposes an alternative synergy for sustainability It situates nuclear power as a socio technical infrastructure embodying a particular development discourse and practice of energy and economic development The book

reveals the political economy of this arrangement and examines the latter's ability to respond to the environmental crisis. Manu V Mathai argues that the existing overwhelmingly growth focused highly technology centric approach for organizing economic activity is unsustainable and needs to be reformed. Within this imperative for change, nuclear power in India is found to be and is characterized as an authoritarian technology. Based on this political economy critique, the book proposes an alternative: a synergy of ideas from the fields of development economics, energy planning and science, technology and society studies. *Encyclopedia of Renewable Energy, Sustainability and the Environment*, 2024-08-09. Encyclopedia of Renewable Energy, Sustainability and the Environment. Four Volume Set comprehensively covers all renewable energy resources including wind, solar, hydro, biomass, geothermal energy and nuclear power to name a few. In addition to covering the breadth of renewable energy resources at a fundamental level, this encyclopedia delves into the utilization and ideal applications of each resource and assesses them from environmental, economic and policy standpoints. This book will serve as an ideal introduction to any renewable energy source for students while also allowing them to learn about a topic in more depth and explore related topics all in a single resource. Instructors, researchers and industry professionals will also benefit from this comprehensive reference. Covers all renewable energy technologies in one comprehensive resource. Details renewable energies, processes from production to utilization in a single encyclopedia. Organizes topics into concise, consistently formatted chapters perfect for readers who are new to the field. Assesses economic challenges faced to implement each type of renewable energy. Addresses the challenges of replacing fossil fuels with renewables and covers the environmental impacts of each renewable energy. *The Economics of Climate Change* Anthony David Owen, 2004.

Climate Change and the Private Sector Craig Hart, 2013-07-24. Climate Change and the Private Sector explores the challenges of transforming our energy infrastructure to become carbon neutral and adapting to climate change in the twenty-first century. It examines the critical role that the private sector must play in these challenges. To transform the global energy complex to be carbon neutral within a time frame designed to prevent irreparable damage to the environment presents unprecedented challenges. The private sector must deploy financial, material and engineering resources on a scale never before undertaken, with government providing leadership, removing barriers and supporting industry efforts through policies that mobilize markets to achieve environmental objectives. A key element of supporting private sector initiative to address climate change is policies that help form and sustain markets that supply finance and generate demand for the technologies necessary to transform our energy infrastructure. The characteristics and examples of these policies are explored in detail. Companies that respond to these challenges both by mitigating greenhouse gases and adapting to climate change will enhance their own competitiveness and contribute to society in the process. Companies that embrace the challenge to decarbonize their manufacturing operations, whether in response to regulation or the threat of regulation or market opportunities, invariably discover ways to improve their operations in the process that could potentially enhance their ability

to produce better products more efficiently The book explores examples of companies that have redesigned their products and manufacturing processes and in doing so transformed themselves and reshaped their industries As in the case of companies mitigating greenhouse gas emissions companies that lead their industries in adapting their own operations to a changing physical environment are more likely to ensure their resilience in a changing business environment This book provides business policy and academic audiences with an in depth exploration of the subject and a practical guide to action

Sustainable Energy Education in the Arctic Gisele M. Resource Accounting for Sustainability Assessment Mario Giampietro,Richard J. Aspinall,Jesus Ramos-Martin,Sandra G. F. Bukkens,2014-05-30 The demands placed on land water energy and other natural resources are exacerbated as the world population continues to increase together with the expectations of economic growth This combined with concerns over environmental change presents a set of scientific policy and management issues that are critical for sustainability Resource Accounting for Sustainability Assessment The nexus between energy food water and land use offers an approach for multi scale integrated assessment of this nexus It presents a comprehensive and original method of resource accounting for integrated sustainability assessments The approach is illustrated with three detailed case studies the islands of Mauritius the Indian state of Punjab and the energy economy of South Africa The relationships between flows of goods services and materials in these case studies offer valuable insights The book provides a much needed quality control on the information used in deliberative processes about policy and planning activities This innovative book will be of interest to researchers students and practitioners in the fields of sustainability science international development industrial ecology sustainable resource management geography and ecological economics

Environmental Sustainability Raghbendra

Jha,K.V. Bhanu Murthy,2006-09-27 With globalization fast becoming an irreversible process it is necessary to pay increased attention to the implications for environmental sustainability However the so called environmental Kuznets curve EKC argument implies that rapid economic growth in many developing countries should be environmentally unsustainable Environmental Sustainability addresses this dichotomy and articulates a notion of consumption sustainability that is both universal and pertains to the indefinite future Additionally it emphasizes the importance of addressing a broad spectrum of sources of environmental degradation and relates this measure to an index of economic achievement more complete than per capita income As well as the EKC authors Jha and Murthy also critique the Environmental Sustainability Index ESI and empirically substantiate the proposition that a certain type of development in the presently high income countries is primarily responsible for global environmental degradation Several policy conclusions for global environmental management are also advanced Throughout Jha and Murthy comprehensively evaluate existing approaches to environmental sustainability and critically review empirical studies of environmental degradation and economic development making this an invaluable source of information for those concerned with environmental economics and political economy Sustainable Development in a Globalized World Björn Hettne,2008-01-15 This book offers a highly original approach to the analysis of globalization and global governance Focusing on important global issues such as development peace and security the international authors present a true multicultural perspective on the impact of globalization on development and peace
