Clean Energy from the Earth, Wind and Sun William S. Pintz,Hermina Morita,2016-11-21 This book documents the socio environmental context and early history of Hawaii's attempt to substitute renewable energy sources and energy efficiency measures for oil imports It identifies areas of policy formulation where clean energy strategies were effective and areas where the state's policy strategy was either inappropriate or constrained by political or institutional factors Although Hawaii's Clean Energy

Initiative is a unique partnership formulated to meet Hawaii's specific needs and resources the policy process addressed problems that are common outside the state While the case study involves clean energy policies many of the issues are applicable to public policy development topics in other sectors Examples of these general interest policy topics include understanding how the political and socioeconomic climate may influence policy assumptions formulating a regulatory and legal framework for monitoring policy compliance designing and understanding the implications of subsidy and tax incentive policies managing conflicts with policies in other sectors addressing the interests of existing and future stakeholders creating strategies for public consultation and information dissemination using external expertise from government agencies academic institutions and private consultants designing performance and evaluation metrics for measuring progress The book is intended for use in graduate and senior undergraduate courses dealing with the formulation implementation and impact of public policy It also provides researchers involved in the development and implementation of clean energy with a guide to the hurdles likely to be encountered in moving innovation from the technical sphere to the practical real world and how to overcome them Professional policymakers may benefit from an example of a process to create a workable clean energy policy

Sustainable Energy Namir Khan,Willem H. Vanderburg,2001 This annotated bibliography introduces readers to preventive approaches for making the energy requirements of modern ways of life more sustainable Since a society can neither create nor destroy energy all energy is temporarily borrowed from the biosphere and returned to it in degraded form The activities of a way of life of a society that involve energy flows may be represented as a network for which the biosphere acts as the ultimate source and sink This network and therefore the energy basis for a modern life style will be sustainable when the biosphere can perform these roles indefinitely The present bibliography regards the preventive approaches related to energy as a capital component of preventive approaches for improving the sustainability of contemporary civilization This book as well as the two companion volumes Sustainable Production and Healthy Cities is the result of a twelve year research project carried out at the Center for Technology and Social Development at the University of Toronto The research findings led to the development of a new conceptual framework and strategy aimed at converting technological and economic growth into development that would gradually become more sustainable
