**Interdisciplinarity and Wellbeing** Roy Bhaskar, Berth Danermark, Leigh Price, 2017-07-06

In this book the authors provide a much needed general theory of interdisciplinarity and relate it to health wellbeing research and

professional practice In so doing they make it possible for practitioners of the different disciplines to communicate without

contradiction or compromise resolving the tensions that beset much interdisciplinary work Such a general theory is only

possible if we assume that there is more to being ontology than empirical being what we can measure directly Therefore the

unique approach to interdisciplinarity applied in this book starts from ontology namely that there is a multimechanismicity a

multiplicity of mechanisms in open systems and then moves to epistemology By contrast the mainstream approach which fails

to acknowledge ontology is unserious and tends to result in a methodological hierarchy un conducive of interdisciplinarity in

which empiricist science is overtly or tacitly assumed to be the superior version of science This book is primarily aimed at

those people interested in improving health and wellbeing such as researchers policy makers educators and general practitioners However it will also be useful to academics engaged in the broader academic debate on interdisciplinary metatheory **Promoting Interdisciplinarity in Knowledge Generation and Problem Solving** Al-Sugri, Mohammed Nasser,Al-Kindi, Abdullah Khamis,AlKindi, Salim Said,Saleem, Naifa Eid,2017-10-31 Interdisciplinary research is a method that has become efficient in accelerating scientific discovery The integration of such processes in problem solving and knowledge generation is a vital part of learning and instruction Promoting Interdisciplinarity in Knowledge Generation and Problem Solving is a pivotal reference source for the latest scholarly research on interdisciplinary projects from around the world highlighting the broad range of circumstances in which this approach can be effectively used to solve problems and generate new knowledge Featuring coverage on a number of topics and perspectives such as industrial design ethnographic methods and methodological pluralism this publication is ideally designed for academicians researchers and students seeking current research on the promotion of interdisciplinarity for knowledge production [Emerging Perspectives from Social Realism on Knowledge and Education](#) Graham McPhail, Richard Pountney, Leesa Wheelahan, 2024-10-28 This book brings the key ideas and concepts of social realism to bear on current debates in the fields of knowledge and curriculum The key concern of this collection is to highlight matters related to knowledge and the influence these dimensions have on the formation of curricula pedagogy identity and equity in educational contexts Presenting new perspectives on the place of various types and forms of knowledge in contemporary education this book explores two central questions what type of knowledge is most important to include in a curriculum and what is meant by disciplinary knowledge The chapters use empirical examples to illustrate how the issues play out on a global stage interweaving the social justice concern of equitable access to disciplinary knowledge throughout In particular the authors address the emerging theorisation of issues related to the decolonisation of curricula the recontextualisation of non traditional knowledge into the curriculum and teacher education Offering new philosophical and theoretical perspectives this book will be of interest to researchers scholars and students examining the fields of knowledge and curriculum and the sociology of education more broadly [The British National Bibliography](#) Arthur James Wells, 2009 [Choice](#), 2008 [Philosophy of Interdisciplinarity](#) Jan Cornelius Schmidt, 2021-12-27 Interdisciplinarity is a hallmark of contemporary knowledge production This book introduces a Philosophy of Interdisciplinarity at the intersection of science society and sustainability In light of the ambivalence of the technosciences and the challenge of sustainable development in the Anthropocene this engaged philosophy provides a novel critical perspective on interdisciplinarity in science policy and research practice It draws upon the original spirit of interdisciplinarity as an environmentalist concept and advocates an essential change in human nature relations The author utilizes the rich tradition of philosophy for case study analysis and develops a framework to disentangle the various forms of inter and transdisciplinarity Philosophy of Interdisciplinarity offers a foundation for a critical reflexive program of

interdisciplinarity conducive to a sustainable future for our knowledge society and contributes to fields such as sustainable sciences social ecology environmental ethics technology assessment complex systems philosophy of nature and philosophy of science It injects a fresh way of thinking on interdisciplinarity and supports researchers as well as science policy makers university managers and academic administrators in critical reflexive knowledge production for sustainable development

**Joyce in the Belly of the Big Truck; Workbook** Joyce A. Cascio,2005-05     Unity of Knowledge (in Transdisciplinary Research for Sustainability) - Volume I Gertrude Hirsch Hardon,2008-12-31 Unity of Knowledge in Transdisciplinary Research for Sustainable Development theme is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Today there is a social need for a comprehensive unity of knowledge that would provide orientation and ensure action in the context of the complex problems of modern civilization Based on an intellectual need for unity of knowledge different concepts of unity of knowledge have emerged in the course of the history of ideas The intellectual need for unity can be directed at the world science action or the individual It can involve the quest for the unity of the world based on a principle that is immanent in it the unity of science as a theoretical methodical or epistemological unity the unity of action as a correlation of scientific pragmatic and moral knowledge or finally unity as the educational task of the individual The concepts associated with unity of knowledge can go in two directions The first assumes that there is a unity existing in the world that can be perceived by man It is thought of as an order of being i e an ontological unity of the plurality of phenomena that consist in their common nature The other direction is based on the assumption that unity is a construction of a subject based on its cognitive principles and structures Thus it is not something that can be discovered as an existing objective order and is instead subjective These two volumes present some aspects of Unity of Knowledge in Transdisciplinary Research for Sustainable Development in three parts The purpose of the first part is to trace back the core ideas in transdisciplinary thinking in the history of western philosophy and science to locate socially the concerns of

transdisciplinary research and to give an account of the development of transdisciplinary research. The second group of chapters deals with methodological and management problems related to transdisciplinary research with regard to problem identification and structuring of research questions with knowledge integration in problem investigation as well as with evaluation. An outline of the institutional measures and transformations to enable and support transdisciplinary research is given in the third part. Institutional strategies build on organizational arrangements and links across academic institutions in education and research on networks between science and society for joint knowledge production in temporally limited settings of research programs or projects but they also set up new institutions such as centers for advanced studies, national offices, agencies and networks. These two volumes are aimed at a wide spectrum of audiences: University and College Students, Educators, Research Personnel and all those concerned with sustainable development.

### **Social-Ecological Transformation**

Karl Bruckmeier, 2016-06-03. This book advances a social ecological theory to reconnect nature and society through sustainable transformation of interacting social and ecological systems. Social ecology develops as an interdisciplinary science by using knowledge from the social sciences especially sociology and economics and from natural scientific ecology. Knowledge integration across the boundaries of social and natural sciences is not widespread blocked by the specialisation of theories and their competing forms of explanation and interpretation. Chapters in this book describe a new social ecological theory that connects concepts and theories from both sides to create a new interdisciplinary theory. Inter and transdisciplinary knowledge synthesis creates possibilities to analyse global environmental problems more systematically by integrating specialized research on environmental problems. The author uses social ecological theory to analyse and explain problems and processes of global change in modern society such as climate change and adaptation to it, ecosystem change and transformation of the industrial energy regime finally offering pathways of transformation to a future sustainable society.

### **Transdisciplinary Research and Sustainability**

Martina Padmanabhan, 2017-10-12. Transdisciplinarity is a new way of scientifically meeting the challenges of sustainability. Indeed interdisciplinary collaboration and co-operation with non academic practice partners is at the core of this creating contextualised socially relevant knowledge about complex real world problems. Transdisciplinary Research and Sustainability breaks new ground by presenting transdisciplinary research in practice drawing on recent advances by the vibrant transdisciplinary research communities in the German speaking world. It describes methodological innovations developed to address wide ranging contemporary issues including climate change, adaptation, energy policy, sustainable agriculture and soil conservation. Furthermore the authors reflect on the challenges involved in integrating non academic actors in scientific research on the tensions that arise in the encounter of theory and praxis and on the inherently normative political nature of sustainability research. Highlighting the need for academic institutions to be transformed to reflect transdisciplinarity this timely volume will appeal to postgraduate students and postdoctoral researchers interested in fields such as Sustainability Science.

Transdisciplinary Studies and Philosophy of Science Philosophy of and as Interdisciplinarity Michael H. G. Hoffmann, Chiara Lisciandra, Jan Cornelius Schmidt, Nancy J. Nersessian, 2013 **Co-Evolution of Nature and Society** Jens Jetzkowitz, 2018-08-27 This book offers support for interdisciplinary research on the interactions of nature and society. It is based on the hypothesis that a science of coevolution is needed to explore paths to a sustainable future. Jens Jetzkowitz initially discusses why social science knowledge only rarely finds its way into sustainability discourse. One significant issue is a view of science that separates knowing and acting and the book illustrates current problems in conceptualising interdisciplinary knowledge production. It then goes one step further and introduces a workable alternative concept taking philosophical pragmatism as a point of departure. Sustainable development goals and transdisciplinarity are currently subject to widespread discussions and Jetzkowitz takes a stance on the debates from the perspective of coevolutionary science. This book will appeal to scholars and students interested in environmental and sustainability discourses and to anyone willing to think outside the box. Transdisciplinarity For Sustainability Martina M. Keitsch, Walter J.V. Vermeulen, 2020-11-23 This volume explores interactions between academia and different societal stakeholders with a focus on sustainability. It examines the significance and potential of transdisciplinary collaboration as a tool for sustainability and the SDGs. Traditionally academia has focused on research and education. More recently however the challenges of sustainable development and achieving the SDGs have required the co production of knowledge between academic and non academic actors. Compromising theory methods and case studies from a broad span of transdisciplinary collaboration. Transdisciplinarity For Sustainability Aligning Diverse Practices is written by specialists from various academic disciplines and represents an important step forward in systematising knowledge and understanding of transdisciplinary collaboration. They are designed to provide a roadmap for further research in the field and facilitate pursuing and realizing the SDGs. The book will appeal to researchers and postgraduate students in a variety of disciplines such as architecture design economics social sciences engineering and sustainability studies. It will also be of significant value to professionals who are engaged in transdisciplinary collaboration that supports sustainable development. Sustainable Interdisciplinarity: Human-Nature Relations Alessio Russo, Giuseppe Cirella, 2020 Sustainable interdisciplinarity focuses on human nature relations and a multitude of contemporary overlapping research between society and the environment. A variety of disciplines have played a large part in better understanding sustainable development since its high profile emergence approximately a quarter of a century ago. At present the forefront of sustainability research is an array of methods techniques and growing knowledge base that considers past present and future pathways. Specific multidisciplinary concentrations within the scope of societal changes urban landscape transformations international environmental comparative studies as well as key theories and dynamics relating to sustainable performance are explored. Specializations in complex sustainability issues address international governance arrangements rules and organizations both public and private within the scope of four themes sustainability human

geography environment and interdisciplinary societal studies This book contains eleven thoroughly refereed contributions concerning pressing issues that interlink sustainable interdisciplinarity with the presented themes in terms of the human nature interface     *The Intellectual Structure of Sustainability* A M M Maruf Hossain,2025-03-31 This research monograph creates human intellectual capability for the production of sound knowledge regarding things realities in their totalities as the production of such knowledge termed here as integrated knowledge is imperative for the provision of an effective intellectual treatment of sustainability The research that is presented here is composed of five consecutive parts where Part I constructs a novel intellectual process that aims to produce integrated knowledge regarding a sample thing reality This is followed by Parts II IV having thoroughly tested this intellectual process in regard to this capacity Part V brings the key contributions of Parts I IV together resulting in the production of the theory of integrated knowledge creation which is formed here on the basis of the production of sound knowledge regarding the given thing reality in its totality As such the formation of this theory unearths the foundation of a new avenue of knowledge termed here as the scholarship of sustainability

**Transdisciplinary Research and Practice for Sustainability Outcomes** Dena Fam,Jane Palmer,Chris Riedy,Cynthia Mitchell,2016-11-10 Transdisciplinarity is a form of research and practice that synthesises knowledge from a range of academic disciplines and from the community There is now global interest and a significant body of work on transdisciplinarity and its potential to address the apparently intractable problems of society This creates the opportunity for a specific focus on its practical application to sustainability issues Transdisciplinary Research and Practice for Sustainability Outcomes examines the role of transdisciplinarity in the transformations needed for a sustainable world After an historical overview of transdisciplinarity Part I focuses on tools and frameworks to achieve sustainability outcomes in practice and Part II consolidates work by a number of scholars on supporting transdisciplinary researchers and practitioners Part III is a series of case studies including several international examples that demonstrate the challenges and rewards of transdisciplinary work The concluding chapter proposes a future research pathway for understanding the human factors that underpin successful transdisciplinary research As Emeritus Professor Valerie Brown AO notes in her Preface this book moves transdisciplinary inquiry into the academic and social mainstream It will be of great interest to researchers and practitioners in the fields of sustainability qualitative research methods environmental impact assessment and development studies
