Green Chemistry Mike Lancaster,2025-05-23 Climate change plastic in the oceans and air pollution are just three of the major environmental problems facing planet Earth It will take a global concerted effort to solve these from change in consumer culture and better global regulation to more sustainable product design and carbon neutral pollution free production processes Green chemistry does not have all the answers but with at least 98% of products having a chemical industry input along the supply chain adoption of the principles of green chemistry can make a huge difference This 4th edition still focuses on the core principles of green chemistry but has a new emphasis on how it can help solve many of the environmental problems facing society In particular there is a new chapter on energy decarbonisation and climate change bringing together sustainable energy solutions and possibilities for a fossil free chemical industry and showing how green chemistry can help other sectors such as transport and energy generation achieve net zero There is also discussion of the UN Sustainability Goals and how green chemistry is helping achieve these goals Green chemistry has moved on since the first edition of this book whilst still covering the basics this latest edition also looks at the practical solutions developed This timely textbook originally designed to cover a Masters course in Clean Technology and associated undergraduate modules at the University of York is suitable for undergraduates and post graduates as well as industrialists looking for new ways of thinking how more sustainable products and processes may be developed **Worldwide Trends in Green Chemistry**

Education Vânia Zuin,Liliana Mammino,2015-06-01 Educating the next generation of chemists about green chemistry issues such as waste minimisation and clean synthesis is vital for environmental sustainability This book enables green issues to be taught from the underlying principles of all chemistry courses rather than in isolation Chapters contributed by green chemistry experts from across the globe with experience in teaching at different academic levels provide a coherent overview of possible approaches to incorporate green chemistry into existing curriculums Split into three sections the book first introduces sustainability and green chemistry education before focussing on high school green chemistry education

initiatives and green chemistry education at undergraduate and post graduate levels Useful laboratory experiments and in class activities to aid teaching are included This book is a valuable resource for chemical educators worldwide who wish to integrate green chemistry into chemical education in a systematic and holistic way It is also of interest to anyone wanting to learn more about the different approaches adopted around the world in sustainability education **Eco-friendly Synthesis of Fine Chemicals** Roberto Ballini,2009 The 20th century has seen a phenomenal growth in the global economy and continuous improvement in the standard of living in the industrialized countries Sustainable development has become an ideal target in recent years and in the early 1990s the concept of Green chemistry was launched in the USA as a new paradigm and since 1993 it has been promoted by the National Science Foundation NSF and the Environmental Protection Agency EPA The success of the pharmaceutical industry is in large part due to the towering achievement of organic chemistry a mature science which emerged as a distinct discipline well over 150 years ago however this has been both a blessing and a curse Many of our most reliable strategies for assembling target molecules employ reactions which are fifty to one hundred years old and are often named in honour of their discoverers

Green Chemistry and Green Materials from Plant Oils and

Natural Acids Zengshe Liu,George A Kraus,2023-12-22 There is an increasing awareness that materials and chemicals produced from fossil fuels are not sustainable both in terms of the pollution caused by the extraction and production processes and the fact that there is only a finite supply of these fossil fuels Therefore there is a strong incentive to find sources for chemicals and materials from source materials that we know we can continue to generate Plants are a source of a wide variety of chemicals many with interesting properties and these chemical feedstocks are considered renewable rather than finite Green Chemistry and Green Materials from Plant Oils and Natural Acids covers the application of these natural materials in producing polymers lubricants and plasticisers
