Trackstick

Congratulations... only to the full...

First, Time for Up...

How it works: The Super Trackstick utilizes a vibration detection circuit to place the unit in a "sleep" mode after 3 minutes of non activity. As soon as vibration (movement) is sensed, the unit instantly becomes active and starts logging data. This circuit is always active, and ... be determined via user programming. At the super! each hour, the unit turns on for a few seconds to transmit satellite location and world position. This special feature extends battery life significantly.

Programming: Super Trackstick... With the unit inserted into your USB port, click... and record options... "super". You can select power... user guide... above details, see page 10 of...

Full Power: Records...
Power Save: Recording...

To increase frequency... mode to "normal", then select from 1 to 15 minute intervals.

IMPORTANT INITIAL SET UP: When ready to use, TrackStick must be turned on and exposed to "open sky" for 15-30 minutes in order to "log" all available satellites. During this time, the vibration detector will not turn unit off until all available satellites are located. After this period, TrackStick may be placed in a location of your choice. Do not leave TrackStick turned on indoors, as it will lose battery power rapidly as it searches for satellites.
