From Buyer to Integrator Geoffrey Parker, 2011

Using case study data we describe how a large personal computer manufacturer changed its supply chain management strategy after outsourcing the majority of its design and manufacturing activities to a network of focused suppliers To cope with this new structure the firm created highly skilled generalists "supply chain integrators" who coordinate product development marketing production and logistics from product concept to delivery across firm boundaries We particularly focus on the skill set that characterizes these integrators Finally we use the case evidence combined with previous theory to suggest a specific program of research into coordinating product development across disaggregated supply chains

Framework and Key Techniques for Supply Chain Integration Yanfang Huo,2009 A Framework and Key Techniques for Supply Chain Integration Industry-specific Added Values and Challenges of Supply Chain Management Integration in the Product Development Process Karina Schneider,2017 Supply Chain Management SCM integration in the product development process can be highly beneficial for companies as the prime example IKEA shows The company integrates the logistics functions in the product development process resulting in advantageous packaging and product design But while IKEA is the most prominent example of SCM integration in the product development process other companies also perform this integration The literature on SCM integration in the product development process can be described as scarce at best However there is hardly any literature on the industry specific aspects regarding SCM integration Furthermore the literature does not depict which aspects of SCM integration in the product development process are important to practitioners and how they perceive the effects of the integration Therefore this thesis wants to define the industry specific factors that

practitioners remark to have the highest added value or to pose a challenge in regard to the SCM integration in the product development process To research these factors both an online survey and expert interviews were employed The online survey determined how prevalent the topic of SCM integration in product development processes is in industrial companies as well as the drivers leading to the decision to integrate and the effects which can be observed due to the integration From the answers three focus topics for the expert interviews were identified time to market product launch and collaboration and communication The expert interviews were conducted with SCM experts from the pharmaceutical the consumer packaged goods and the industrial manufacturing industry The results from the online survey and the expert interviews show that SCM integration is facing increasing attention from the industry The main driver to integrate the SCM functions is the reduction of cost in the product development process Furthermore the time to market can be reduced and the product launch can be improved through the SCM integration in the product development process Also recommendations including targeted integration launch strategies and customer service are made depending on the industry Regarding the topic of collaboration and communication the main challenge remains the functional structure of companies
