**Encyclopedia of Surfactants Volume 1** ,1980-02 PREFACE This comprehensive modern encyclopedia of surfactant products has been compiled with the cooperation of the major national and international surfactant manufacturers in order to give the user quick and thorough information on each tradename product that is included Information from thousands of brochures technical bulletins and data sheets has been gleaned in order to make a complete profile on each surfactant product available from one source this three volume compendium Though sometimes limited by the information provided by the manufacturers in most instances the chemical ingredients properties form applications etc of each product are discussed in detail The use of surfactants pervades almost every chemical industrial concern including textiles paints pesticides foods cosmetics pharamceuticals etc We hope that because of the universality of surfactants this reference work will be able to serve as a useful tool to the many chemical engineers and salespeople here and abroad We want to extend our thanks to Roberta Dakan for her dedication and tireless efforts in helping make this encyclopedia as accurate and consistent as possible When the temperature at which properties such as viscosity density surface tension solubilities etc is not included a standard temperature of 25 C is to be assumed The information in this

publication is reliable to the best of our knowledge We would be glad to be informed of any errors or omissions so that these can be integrated into subsequent editions of this encyclopedia Surfactants in Chemical/Process Engineering

*Handbook of Surfactants* M. R. Porter,1991-01-05 The worldwide consumption of surfactants now exceeds several million tonnes per annum Six of the major types represent approximately 80% of the volume consumed whereas the remaining 20% is made up of approximately 40 different chemical types

Commercially produced surface active agents are not pure chemicals and within each chemical type there can be tremendous variation Technical staff who are not familiar with surfactants are frequently bewildered by the enormous variety of different products on the market and the vast body of literature which exists on the composition and properties of surfactants The selection of the best surfactant for any given use therefore becomes a major problem This volume arose from the clear need to have available a simple reference book summarising the different types of surfactants on the market and their properties The concept and structure of the book evolved from early attempts to define chemical structure property relationships of all the different types of surfactants commercially available into a simple handbook providing essential background information for the surfactant user It is realised that most users will be developing their own data bank of structure end use property relationships and they will therefore be the experts on end use **Surfactants in Solution** ,1989
