Surgical Neuropathology Of Focal Epilepsies Textbook Atlas:

Surgical Neuropathology of Focal Epilepsies Ingmar Blumcke, Harvey B. Sarnat, Roland Coras, 2015-09-15 The need for neuropathology reviews in epilepsy surgery tissues steadily increases. However, textbooks and case presentations highlighting and focusing on this specific topic are rare. The authors of this book reviewed their professional experience in surgical and post mortem neuropathology studies to compile a coherent summary of clinico-pathological findings, current classification schemes, useful protocols and research data for major histopathological entities of brain lesions encountered in modern epilepsy surgery programs, which include hippocampal sclerosis, brain tumours associated with early epilepsy onset, malformations of cortical development, brain inflammation and malformative vascular lesions. They did not intend to be exhaustive but rather representative of the main lesions and pathologies encountered. Thirty two illustrated cases constitute the core of this book and will be very helpful in current practice.
