Sustainable Building Standards and Guidelines for Mixed-Use Buildings Ranjit Gunewardane,2018-09-29 With increasing numbers of consumers becoming more environmentally conscious in their purchasing behavior environmental practices are a decisive factor in the real estate sector Reconciling the seemingly opposing goals of improving the environment and providing the

needed infrastructure to support economic growth is the origin of the sustainable green building concept. This concept is simply about being mindful of the potential impact that the design, construction, and operation of commercial buildings will have on the environment and devising innovative strategies to mitigate or eliminate these impacts. This means changing the traditional process of designing buildings and their construction and operation as well as the integration of emerging trends in many technology fields into buildings. The Sustainability Building Standards and Guidelines contains information intended as minimum standards for designing, constructing, and equipping sustainable mixed use buildings. Insofar as practical, these standards relate to desired performance or results or both. Sustainable green buildings are as much about construction as they are about design. The book includes a description of the special design features, construction processes, the systems of operation and maintenance, and the interrelationships of these various functions. Increasingly staying competitive means building owners, property developers, designers, manufacturers, and contractors are focused on achieving increasingly environmentally friendly and energy efficient buildings with the ultimate goal of producing environmentally and energy neutral buildings.

Design Management for Sustainability Stephen Emmitt, 2017-07-28. Building on the special edition *Aspects of Design Management* Volume 3, 1, 2007, this publication brings together the rapidly developing field of design management with that of environmental sustainability. Eight articles drawn from around the world help to provide some critical insights into the relationship between ecological sustainability and the application of design management in a number of different contexts. Contributions range from early policy decisions and public procurement options to corporate social responsibility of architects and the promotion of materials and products to specifiers, to encouraging change and a design process evaluation.

method to investigations into the role and contribution of construction design managers and facilities managers to a sustainable built environment Collectively the articles provide a unique multi disciplinary contribution to the theoretical development of the design management field as well as guidance on the practical application of methods and tools
