Sustainable Facility Management The Facility Managers Guide To Optimizing Building Performance:

Sustainable Facility Management Chris Hodges,Mark Sekula,2013-11-19 The current state of the facility management world is dynamic and evolving More and more facility managers are participating in the design and construction of the buildings that they will eventually operate Technologies such as building information modeling BIM offer ways to bridge the gap between the design and construction phase and the operation of buildings by making much more information available than existed in the past We are also starting to see the emergence of the importance of a properly educated workforce in facility management Emerging trends and issues include the effective utilization of performance management tools

Corporate Social Responsibility and the Triple Bottom line This book captures in a practical and utilitarian way information best practices and processes that will assist facility managers in addressing these trends as well as ongoing challenges It provides a set of benchmarks reference points and guidance that will enable the facility management community to be better informed and prepared in the execution of its mission It serves as a great resource for those who are veterans in the community as well as those who are new entrants to or are examining the career opportunities within Rethinking Sustainability in Facilities and Workplace Management Frans Melissen,Bert Smit,Vitalija Danivska,Andrew Ngawenja

Mzembe,2022-08-19 This book discusses sustainability within the facility management industry However it is not another anthology of so called best practices and the seemingly endless range of certification schemes It is also not a marketing guide on how to communicate high pitched sustainability ambitions to potential customers to increase short term market share Instead this book is based on the realisation that most facility management businesses and departments actually find it hard to truly integrate sustainability into their strategies tactics and day to day operations in a coherent way It is also based on the reference point that sustainable development cannot be realised only through technological advancements and new procedures it requires new behavioural patterns of people Not only of your own employees as a supplier or department but also of those for whom you design stage and manage optimal workplace experiences Those patterns will not emerge from nowhere but need to be purposely created and cultivated based on a thorough understanding of what people and organisations need want and desire Through reviewing specific barriers and opportunities related to practical situations and examples at all three levels of facility management the operational tactical and strategic level and supported by the latest theoretical insights this book provides students and practitioners with inspiration and suggestions for using sustainability as a guideline for improving workplace experience concepts and FM strategies services and processes Each chapter uses specific cases and examples as the starting point for reflecting on avenues to move from treating sustainability as an add on to using it as a powerful concept to create optimal workplace experiences In doing so these reflections provide lecturers students and current and future professionals with practical guidelines and pointers to take sustainability within the facility management industry to a much needed next level Facilities Management and Corporate Real Estate Management as

Value Drivers Per Anker Jensen, Theo van der Voordt, 2016-10-04 Facilities Management FM and Corporate Real Estate Management CREM are two closely related and relatively new management disciplines with developing international professions and increasing academic attention. Both disciplines have from the outset a strong focus on controlling and reducing cost for real estate facilities and related services. In recent years there has been a change towards putting more focus on how FM and CREM can add value to the organisation. This book is driven by the need to develop a widely accepted and easily applicable conceptual framework of adding value by FM and CREM. It presents the state of the art of theoretical knowledge and empirical evidence about the impact of buildings and facilities on 12 value parameters and how to manage and measure these values. The findings are connected to a new Value Adding Management model. The book is research based with a focus on guidance to practice. It offers a transdisciplinary approach integrating academic knowledge from a variety of different fields with practical experience. It also includes 12 interviews with practitioners shedding light as to how they manage adding value in practice. This is a much needed resource for practitioners, researchers and teachers from the field of FM and CREM as well as students at both undergraduate and postgraduate level.

LEED Lab Patricia Andrasik, 2021-11-22

Facility performance evaluations inform the long term life of a building and do not end with design or construction. To this aim, Patricia Andrasik created LEED Lab in collaboration with the US Green Building Council, an increasingly popular international interdisciplinary collegiate laboratory course which utilizes campus buildings as demonstration sites to facilitate the green assessment of existing buildings. LEED Lab: A Model for Sustainable Design Education uses the LEED O&M building rating system to measure and achieve performance driven campus facilities in which the readers work and operate. The book explains in simple terms the theory, tasks, tools and techniques necessary for credit implementation and achievement and includes case studies and exercises for practical application in each chapter. Readers will learn the conceptual scientific framework used to understand existing operational performance and how to quantify sustainable synergies, create green campus policies with administrators and understand systems such as energy and water in a research based application. The entire manual is accompanied by a vast online Teaching Toolkit to provide helpful educational resources such as syllabi, lectures, examinations, assignments, Individual Student Progress Presentation (ISSP) templates, web resources and much more. An excellent guide for undergraduate or graduate students enrolled in LEED Lab or a similar campus building assessment course as well as construction or architectural professionals and facility managers, this manual navigates the complexities of using a green building diagnostic tool such as LEED O&M towards greater environmental literacy.

The Sustainable Museum Christopher J. Garthe, 2022-11-30 The Sustainable Museum is the first book to outline a coherent strategy for the direction of museums as it relates to sustainability in the museum and heritage sector. Arguing that museums must place sustainability at the centre of all their activities if they are to become key actors with a clear societal role, Garthe considers the issues that museums will likely face as they take on their new roles. Presenting case studies from a

wide range of museums around the world the book considers different ways of implementing sustainability in different types and sizes of institutions Whilst the book clearly outlines the need for change it also provides guidance about how to change Garthe does this by considering specific concepts and approaches to sustainability in relation to the different aspects of museum operations The book includes a hands on manual for implementing sustainability management in a museum whilst also considering the challenges practitioners will encounter and considering what the future of the sustainable museum might look like The Sustainable Museum will be essential reading for museum and heritage professionals around the globe The book will also be of interest to academics and students engaged in the study of museums arts and cultural management business administration change management or sustainable development **Future Campus** Ian Taylor,2019-07-25 This book is to help architects design teams and University clients estates departments and academics in their pursuit of practical and innovative solutions for the creation of enabling higher education learning environments It includes abundant examples of solutions to design problems and advice on best practice This book argues that investment in the higher education sector is a driver for intellectual social and economic development offering opportunities for positive impacts for the physical environment on the character and performance of higher education The editor believes that good outcomes result from good design which should address elements such as learning from best current practice the importance of clear briefing good environmental performance the positive social impacts and also the importance of ensuring a beautiful outcome It has chapters contributed from leading edge practices including case studies with highly illustrated project examples All this is underpinned by an understanding of the practicalities of working in the sector as well as the socio political and economic context and trends shaping future practice **Navy Civil Engineer** ,1991 **Sustainable Industries Journal** ,2006
