Sustainable Refurbishment Sustainable Refurbishment:

Sustainable Refurbishment Sunil Shah, 2012-07-16 Sustainable Refurbishment Governments across the EU and developed countries are increasingly being directed towards improving existing built stock as a key ingredient to meeting climate change challenges. This guide to green retro fitting for corporate real estate facility managers and occupiers struggling to reduce their building's carbon footprint will help in the planning and management of a sustainable refurbishment programme. Sustainable Refurbishment is structured into four parts: the first gives the context together with an overview on sustainable development and refurbishment projects separately and the value gained from a sustainable refurbishment. Part Two details the regulatory and financial drivers together with market pressures and provides an overview of where this is leading giving the implications for sustainable refurbishment. Part Three provides technical support on carbon measures helping to determine the feasibility of good practices as part of the refurbishment. Included is a review of energy efficiency, renewable and low carbon technologies and embodied carbon to enable lifecycle carbon calculations together with the necessary behavioural change aspects needed to embed the changes. Linkages and benefits between the technologies will be highlighted. Part Four reviews refurbishment from a wider environmental perspective understanding the challenges and opportunities that exist for particular developments from a materials, water, biodiversity and transport perspective. Throughout the book checklists are provided on typical activities and best practice; these are expanded through relevant case studies and examples to show case previous good practices and lessons learnt. The book's structure allows a matrix approach with Parts Three and Four containing the technical information necessary to deliver sustainable refurbishment. The book provides a much needed link between policy level commitment and detailed technical delivery. This easily digestible and authoritative review of the key issues in green retro fitting is crucial for facilities managers, building surveyors, property managers, owners and corporate real estate involved in sustainable refurbishment by offering the practical support needed to make it happen.

The refurbishment of existing buildings is a neglected subject within sustainable architecture; attention is usually focused on new buildings. Old buildings can use large amounts of energy and provide poor internal conditions for occupants. They may have high heating demand, poor lighting, poor ventilation, solar penetration and glare, and poor control of heating and cooling. Demolition is an option but the alternative of refurbishment is starting to be seen as more sustainable in terms of architectural value, materials use, neighborhood disruption and waste disposal. Building new is more carbon intensive and carries many wider environmental impacts. In addition, the potential impact of low energy refurbishment is much greater than

that for new build since there are many more existing buildings than will be built in the next 10 20 years the period over which many CO2 emission targets apply [The Handbook of Sustainable Refurbishment: Non-Domestic Buildings](#) Baker Nick,2009-09-02 The refurbishment of existing buildings is a crucial yet often neglected subject within sustainable architecture attention is usually focused on new buildings Many old buildings waste large amounts of energy and provide poor internal conditions for occupants through poor lighting poor ventilation solar penetration and glare and poor control of heating and cooling Demolition is an option but the refurbishment alternative is increasingly seen as more sustainable in terms of architectural value materials use neighbourhood disruption and waste disposal In addition the potential impact of low energy refurbishment is much greater than that for new build since there are many more buildings already in existence than will be built in the next 10 20 years the period over which many CO2 emission targets apply The Handbook of Sustainable Refurbishment Non Domestic Buildings offers architects engineers and a wide range of building professionals practical advice illustrated by real examples It moves from principles of sustainable refurbishment to specific design and engineering guidance for a variety of circumstances It emphasises the need for an integrated approach by showing how refurbishment measures interact with one another and with the occupants and how performance is ultimately influenced by this interaction

[Handbook of Sustainable Refurbishment: Housing](#) Simon Burton,2012-03-29 Based on careful analysis and experience in all housing sectors and house types this handbook explains and demonstrates how to incorporate the most effective energy saving measures in the existing housing stock It begins by setting out the basic aims of sustainable refurbishment before presenting a large number of illustrated case studies from a range of single and multi family dwellings A practical section then details the specific measures that can be taken to reduce the energy demand of buildings with extensive references to further resources Written for architects and building engineers the book combines technical and managerial solutions demonstrating that a new refurbishment culture needs to be created that radically improves the energy performance of all existing houses whenever any opportunity presents itself and whenever any work is carried out

[Sustainable Renovation](#) Lisa Gelfand,Chris Duncan,2011-11-08 The complete resource on performing sustainable renovations for both Historic and modern existing buildings This forward looking and insightful guide explores how the sustainable renovation of existing buildings presents great opportunities for initiating extensive changes in the performance of the built environment Great examples of existing building upgrades are examined illustrating how to do sustainable renovations along with current design approaches for radically improving the functionality of existing prewar postwar and late modern buildings Sustainable Renovation saves its key focus for institutional and commercial buildings but discusses the challenges they pose within a global scope that encompasses all building practices Some of the discussions in this book include The significance of energy and resource demands by the building sector and the urgency of reducing loads in existing buildings Management design and construction approaches to achieve major modernization in occupied buildings

International case studies that focus on methods and benefits of successful sustainable transformations of existing building performance Repurposing buildings to preserve style and add performance remains a work in progress as designers and builders discover new methods for improving sustainable practices and standards With incremental modernization and operations strategies available for immediate implementation this book demonstrates the different ways of thinking necessary when considering and attempting the integration of sustainable concepts into existing buildings and enables readers to rethink the world that is built around them

of Victorian Housing Tim Yates,2006 The book analyzes American literature about middle or upper class characters who voluntarily descend the class ranks to experience vital contact by living or associating temporarily with the poor The motivations of these characters and historical figures such as John Reed and Walter Wyckoff range from straightforward bohemian slumming among the exotics to more complex and psychologically wrought investigations of cross class empathy The study begins by charting downclasing processes in works of canonical nineteenth century authors including Melville Hawthorne James Howells and Jewett It then undertakes an original analysis of John Reed s involvement with the 1913 Paterson silk workers strike as a context for understanding Ernest Poole s now forgotten but then best selling fictionalization of the strike in his novel The Harbor In other richly historicized chapters it analyzes distillations of class radicalism in several works by Upton Sinclair in the early drama of Eugene O Neill and in feminist novels of the 1910s by Elia Peattie and Clara Laughlin The concluding chapter looks at sophisticated treatments of vital contact in fiction of the 1930s by Dos Passos Steinbeck and Richard Wright The book provides Americanists with important new ways of thinking about various forms of class identification as they developed in the nineteenth and early twentieth centuries
