The AsiaUSEC Workshop contributes an increase of the scientific quality of research in human factors in security and privacy. In terms of improving efficacy of secure systems, the research included an extension of graphical password authentication. Further, a comparative study of SpotBugs, SonarQube, Cryptoguard, and CogniCrypt identified strengths in each and refined the need for improvements in security testing tools. The CoDeFi Workshop discusses multi-disciplinary issues regarding technologies and operations of decentralized finance based on permissionless blockchain. The workshop consists of two parts: presentations by all stakeholders and unconference-style discussions. The VOTING Workshop covers topics like new methods for risk-limited audits, new methods to increase the efficiency of mixnets, verification of security of voting schemes, election auditing, voting system efficiency, voting system usability, and new technical designs for cryptographic protocols for voting systems and new ways of preventing voteselling by de-incentivising this via smart contracts. The WTSC Workshop focuses on smart contracts, i.e., self-enforcing agreements in the form of executable programs and other decentralized applications that are deployed to and run on top of specialized blockchains.
