**Paradigm Shift from a Linear Economy to a Smart Circular Economy** Mansoor Alaali, Abdalmuttaleb M. A. Musleh Al-Sartawi, Arafat Salih Aydiner, 2025-07-28

The concept of the circular economy has attracted the attention of scholars, researchers, professionals, and policymakers in recent years. The notion is characterised as an economy that intends to keep products, stocks, work in progress, and materials at their highest utility and value, continually distinguishing between their technical and biological cycles. It is devised as a continuous positive development cycle that reserves and improves natural resources, optimizes outputs, and minimizes supply chain related risks by overseeing limited stocks and renewable flows of the stocks. Several legislations and policies are being developed to motivate and integrate SDGs and net zero related approaches in companies, among which the circular economy (CE) is gaining momentum due to its documented impact on the elements of the SDGs and net zero. Efficient management of resources and utility via artificial intelligence is vital towards a smart circular economy by minimizing waste, losses, pollution, and extraction of virgin resources. It is important to note that there is a difference between smart and traditional circular economies. This book focuses on the former and makes distinctions in terms of how technology systems and solutions can be effectively and efficiently implemented. This book, **The Paradigm Shift from a Linear Economy to a Smart Circular Economy: The Role of Artificial Intelligence Enabled Systems, Solutions, and Legislations**, discusses the transition from linear to smart circular economy by dissecting the role of artificial intelligence and other technologies such as big data, IoT, and blockchain in such transformations. The book further aims to provide a platform for researchers, professionals, and students to closely investigate, discuss, and examine the theories, philosophies, ontologies, and the role of governments, policymakers, and businesses in supporting the transition to a smart economy via national initiatives, fiscal policies, and corporate governance. The book highlights the need for collaborative

efforts between various actors including the private and public sectors through cross disciplinary approaches to attain maintain and sustain a smart circular economy    **Proceedings of the Vortex Workshop** Yiqian Wang,Chaoqun Liu,Yan Li,2024-11-15 Written by the leading experts in the field this book results from Vortex Workshop 2023 which took place in San Diego the USA on December 11 13 Vortex is ubiquitous in the universe such as tornado hurricane airplane tip vortex and even star vortex in Galaxy Vortices are also building blocks muscles and sinews of turbulent flows A vortex is intuitively recognized as a rotational swirling motion of fluids but until recently had no rigidly mathematical definition In 1858 Helmholtz first defined vortex as composed of so called vortex filaments which are infinitesimal vorticity tubes which is called as the first generation of vortex definition and identification or G1 Although G1 has been accepted by the fluid dynamics community and almost all textbooks for over a century we can find many immediate counterexamples for example in the laminar boundary layer where the vorticity shear is very large near the wall but no rotation no vortex exists To solve these contradictions many vortex criteria methods have been developed during the past 4 decades More popular methods are represented by the Q criteria methods These methods have achieved part of success in vortex identification which are called the second generation of vortex identification or G2 However G2 has several critical drawbacks First they are all scalars which have no rotation axis directions but vortex is a vector It is hard or impossible to use a scalar to represent a vector Second like vorticity these criteria methods are all contaminated by shear in different degrees Third they are all very sensitive on threshold selections The recently developed Liutex is called the third generation of vortex definition and identification or G3 which is a uniquely defined vector
