

Understanding Prostate Cancer

What is the prostate?

The prostate is a small, walnut-shaped gland in men that produces and stores semen. It is located in the male reproductive system, just below the bladder and in front of the rectum. The prostate gland is responsible for producing and storing semen, which is then released during ejaculation.

How is prostate cancer diagnosed?

Prostate cancer is typically diagnosed through a combination of methods, including a physical exam, a PSA blood test, and a prostate biopsy. A PSA blood test measures the level of prostate-specific antigen (PSA) in the blood, which can be a sign of prostate cancer. A prostate biopsy involves taking a small sample of tissue from the prostate gland for examination under a microscope.

What are the symptoms of prostate cancer?

Common symptoms of prostate cancer include difficulty urinating, frequent urination, and blood in the urine or semen. These symptoms can also be caused by other conditions, so it is important to consult a doctor for a proper diagnosis.
