Smart Home 2025 Setup:

Fundamentals of Innovative Sustainable Homes Design and Construction Avi Friedman, 2023-06-26 This book offers ideas and practices on contemporary design concepts and illustrates them with plans and photographs of outstanding examples. Current planning and design modes of dwellings and neighborhoods are facing challenges of philosophy and form. Past approaches no longer sustain new demands and require innovative thinking. The need for a new outlook is propelled by fundamental changes that touch upon environmental, economic and social aspects. The depletion of non-renewable natural resources and climate change are a few of the environmental challenges. Increasing costs of material, labor, land and infrastructure have posed economic challenges with affordability being paramount among them. Social challenges are also drawing the attention of designers, builders and homeowners. Walkable communities, aging in place and multigenerational living are some of the concepts considered. In addition, live work environments have become part of the economic reality for those who wish to work from home, which has become possible through digital advances. The text would be of interest to scholars working in architecture, urban planning and construction.

Licensing Standard Essential Patents Igor Nikolic, 2021-11-18 What is the licensing framework of standard essential patents (SEPs) for connectivity standards such as 5G and Wi-Fi? How will the framework change with the Internet of Things (IoT)? This book provides comprehensive answers to these questions. For over two decades, connectivity standards have been the subject of litigation and controversy around the globe. Now, with the introduction of 5G and the emergence of the world of connected objects or the IoT, the licensing framework for SEPs is becoming even more contentious. In order to bring clarity to the debate, this book analyses and explains key components of a fair, reasonable and non-discriminatory (FRAND) licence for SEPs, clarifies the economic policy and market background of SEP disputes, examines the interrelated application of contract, patent and competition laws, and describes the approaches by courts and regulators in the EU, US and the UK. Importantly, the book also assesses how the experience from the smartphone and ICT industries can be applied in a new environment of the IoT and considers what needs to be changed in the future SEP licensing landscape. The book provides a holistic coverage of

SEP licensing issues in an attempt to reduce uncertainty within this highly complex and technical area and will be useful to practitioners policy makers SMEs and large technology companies in the IoT as well as academics interested in the field
