Abstract: The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in Ankara, Turkey. The children were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program that included aerobic, strength, and flexibility exercises. Physical fitness was measured using a series of tests, including a 1000m run, a 15m shuttle run, a 1min sit-up test, a 1min plank test, and a 1min side plank test. The results showed that the experimental group had significantly higher scores than the control group in all tests. The 12-week training program had a positive effect on the physical fitness of 10-year-old children.
