**Statistical Rethinking** Richard McElreath, 2018-01-03 Statistical Rethinking A Bayesian Course with Examples in R and Stan builds readers knowledge of and confidence in statistical modeling Reflecting the need for even minor programming in today s model based statistics the book pushes readers to perform step by step calculations that are usually automated This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work The text presents generalized linear multilevel models from a Bayesian perspective relying on a simple logical interpretation of Bayesian probability and maximum entropy It covers from the basics of regression to multilevel models The author also discusses measurement error missing data and Gaussian process models for spatial and network autocorrelation By using complete R code examples throughout this book provides a practical foundation for performing statistical inference Designed for both PhD students and seasoned professionals in the natural and social sciences it prepares them for more advanced or specialized statistical modeling Web Resource The book is accompanied by an R package rethinking that is available on the author s website and GitHub The two core functions map and map2stan of this package allow a variety of statistical models to be constructed from standard model formulas

**Statistical Rethinking** Richard McElreath, 2020-03-13 Winner of the 2024 De Groot Prize awarded by the International Society for Bayesian Analysis ISBA Statistical Rethinking A Bayesian Course with Examples in R and Stan builds your knowledge of and confidence in making inferences from data Reflecting the need for scripting in today s model based statistics the book pushes you to perform step by step calculations that are usually automated This unique computational approach ensures that you understand enough of the details to make reasonable choices and interpretations in your own modeling work The text presents causal inference and generalized linear multilevel models from a simple Bayesian perspective that builds on information theory and maximum entropy The core material ranges from the basics of regression to advanced multilevel models It also presents measurement error missing data and Gaussian process models for spatial and phylogenetic confounding The second edition emphasizes the directed acyclic graph DAG approach to causal inference integrating DAGs into many examples The new edition also contains new material on the design of prior distributions splines ordered categorical predictors social relations models cross validation importance sampling instrumental variables and Hamiltonian Monte Carlo It ends with an entirely new chapter that goes beyond generalized linear modeling showing how domain specific scientific models can be built into statistical analyses Features Integrates working code into the main text Illustrates concepts through worked data analysis examples Emphasizes understanding assumptions and how assumptions are reflected in code Offers more detailed explanations of the mathematics in optional sections Presents examples of using the dagitty R package to analyze causal graphs Provides the rethinking R package on the author s website and on GitHub

Elizabeth A. Donovan, Lucas A. Hoots, Lesley W. Wigglesworth, 2024-07-22. This book offers engaging cross-curricular modules to supplement a variety of pure mathematics courses. Developed and tested by college instructors, each activity or project can be integrated into an instructor's existing class to illuminate the relationship between pure mathematics and other subjects. Every chapter was carefully designed to promote active learning strategies. The editors have diligently curated a volume of twenty-six independent modules that cover topics from fields as diverse as cultural studies, the arts, civic engagement, STEM topics, and sports and games. An easy-to-use reference table makes it straightforward to find the right project for your class. Each module contains a detailed description of a cross-curricular activity as well as a list of the recommended prerequisites for the participating students. The reader will also find suggestions for extensions to the provided activities as well as advice and reflections from instructors who field-tested the modules. *Teaching Mathematics Through Cross-Curricular Projects* is aimed at anyone wishing to demonstrate the utility of pure mathematics across a wide selection of real-world scenarios and academic disciplines. Even the most experienced instructor will find something new and surprising to enhance their pure mathematics courses.

### **Assessment and Treatment Interventions for Traumatic Brain Injury**

Andrew P. Lavender, Ryusuke Takechi, Sarah C. Hellewell, Keisuke Kawata, 2025-10-28. Traumatic brain injury (TBI) is caused by a blow to the head or sudden ballistic head movement. TBI can occur as a result of a collision such as in a motor vehicle accident or as a result of a fall which can happen in several contexts such as sport, military service and training, or accidental falling. TBI is categorised as mild, moderate or severe based on a number of signs and symptoms. Multiple occurrences of injuries can have devastating consequences for patients when the injuries are in the mild category but repeated over several years as seen in sporting contexts. In recent years, the evidence for a link between mild traumatic brain injury and chronic traumatic encephalopathy (CTE) has been mounting rapidly. Treatment of TBI varies greatly across the levels; however, mild TBI is often under-reported and therefore may go untreated. This is particularly common in sporting contexts where athletes and their coaches are very keen to reduce the recovery period and hasten return to play. Common assessment methods may be insufficient for making the return to play decision. New assessment methods are needed. Rehabilitation methods also need to be optimised to ensure the player has fully recovered to protect the player and others from an increased risk of further injury. This Research Topic focuses on brain injury assessment and interventions to improve recovery from mild, moderate or severe TBI categories. We welcome original research articles, minireviews, reviews, comments and meta-analyses employed in animal or human studies relevant to brain injury assessment and rehabilitation interventions.

**Rethinking Inequality Decomposition, with**

**Evidence from Rural China** Jonathan Morduch, Terry Sicular, 1998      **Rethinking the Family** Stanford University. Center for Research on Women, 1982 Twelve original essays chart the latest developments in the debate over the future of the family Focusing on the interaction between feminist critiques and recent defenses of traditional views of the family this book highlights the second stage of contemporary feminist rethinking of the family Outstanding scholars from a variety of disciplines examine key issues in this debate the idea of the monolithic family sexual division of labor and inequality motherhood parenting and mental illness the relationship between family class and state This book makes it clear why the family has emerged in the last decade as the political issue to claim everyone's attention      Rethinking Social Policy Christopher Jencks, 1992 In a fervent appeal for clearer thinking on social issues Christopher Jencks reexamines the way Americans think about race poverty crime heredity welfare and the underclass Arguing that neither liberal nor conservative ideas about these issues withstand close scrutiny he calls for less emphasis on political principles and more attention to specific programs Jencks describes how welfare policy was dominated in the early 1980s by conservatives who promoted ideas that justified cutting back sharply on the social programs of Lyndon Johnson's Great Society They believed that a period of sustained economic growth with low taxes and free markets would do more to help poor people than coddling them with government assistance Despite the economic expansion of the later Reagan years however the problems of persistent poverty grew even more serious The liberals took the initiative in the late 1980s but their proposals failed to win broad popular support With clarity and a gift for apt analogy Jencks analyzes influential books on such subjects as affirmative action Thomas Sowell the safety net Charles Murray the effects of heredity on learning and propensity to commit crime James Q Wilson and Richard Herrnstein ghetto culture and the underclass William J Wilson His intention throughout is to unbundle the empirical and moral assumptions that traditional ideologies tie together making the reader's picture of the world more complicated in other words to force us readers and policymakers to look at the way various remedial plans actually succeed or fail For example he believes that until we transform AFDC so that it reinforces rather than subverts American ideals about work and marriage efforts to build a humane welfare state will never succeed Other prescriptions initially surprising and sometimes shocking show demonstrable good sense once they are examined As the author says If this book encourages readers to think about social policy more concretely it will have served its primary purpose
