listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition

One Hundred Patents That Shaped the

Modern World David Segal,2019-02-07 What would our world today be like without inventions like tarmac aspirin liquid

crystals and barbed wire This guide shows how patents and the inventions they describe have shaped the 21st century It

gives us insights into the inventions big and small that have had huge impacts many unexpected on multiple spheres of our

lives from popular culture and entertainment to global health to transportation to the waging of war It features patent

documents that date from the mid 19th century to the present Patent documents describe inventions and represent an

accurate and rich source of information about the history and current state of modern technology as patents are examined

and their accuracy can be challenged The subject matter covers many technical areas Patents discussed include for example

Morse code the diode triode transistors television frozen foods ring pull for soft drink cans board games such as Monopoly

gene editing metamaterials MRI computerised tomography insulin and monoclonal antibodies such as Herceptin The text is

illustrated with drawings adapted from the original patent documents Patent numbers are included to allow interested

readers to trace the documents Inventions described in the patents are placed in historical perspective For example the book

discusses the role of the cavity magnetron and radar in World War II and the influence of the diode on the development of

broadcasting at the beginning of the 20th century

Genes: A Very Short Introduction Jonathan Slack,2014-09-25 In this

exploration of the concept of the gene Jonathan Slack looks at the discovery nature and role of genes in both evolution and

development Explaining the nature of genetic variation in the human population how hereditary factors were identified as

molecules of DNA and how certain specific mutations can lead to disease Slack highlights how DNA variants are used to

trace human ancestry and migration and can also be used by forensic scientists to identify individuals in crime He also explores

issues such as the role of genetic heritability and IQ as well as the changes that occur in the genes of populations during

evolution An ideal guide for anyone curious about what genes are and how genetics can be put to use this Very Short

Introduction demonstrates the ways in which the gene concept has been understood and used by molecular biologists

population biologists and social scientists around the world ABOUT THE SERIES The Very Short Introductions series from

Müller-Sieburg,Beverly Torok-Storb,Jan W.M. Visser,Rainer Storb,1992-05-11 The idea for this volume was conceived during a discussion in the hallway at a conference in early 1990 What is the best way to detect and define pluripotent hematopoietic stem cells was the question posed by Dr Fritz Melchers After discussing the pros and cons of the available assays for quite some time it became apparent that this topic required a wider expertise and merited a larger forum Thus we decided to extend the discussion and to compile the results in this volume Much to our delight many of the pioneers of recent

experimental and theoretical developments in stem cell research agreed to contribute their expertise to answer the question These authors review both past findings and present insights thus providing an overview of the evolution that has been and is occurring in the field of stem cell research In the light of recent trailblazing developments in both experimental models and in clinical application it is indeed time to reevaluate our knowledge about stem cells Trans plantation of hematopoietic stem cells has become more and more prevalent as a curative therapy in a variety of acquired and genetic diseases including cancer radiation accident as an agent for gene therapy and perhaps even as treatment for autoimmune diseases Stem cells are now derived not only from bone marrow but also from peripheral blood cord blood and fetal liver greatly increasing their availability for human transplantation and in some cases fetal tissues obliterating the need to match donors and hosts
