Times Dual Nature A Common Sense Approach To Quantum Physics:

Time's Dual Nature Jonathan Deutsch, 2010-11-02 Time's Dual Nature provides a rare common sense approach to a usually difficult topic quantum physics. The book utilizes nothing more advanced than high school algebra. Use a calculator. It should therefore be understandable by almost any high school educated adult. The true value and appeal of the book lies in the fact that it addresses the following important issues relevant to our lives: What is time? Can it flow backwards as well as forwards? Can we in any way grow younger with time? Can the future influence the present? What is space? What is matter? What is energy? What is the one simple equation that best summarizes all of reality? Time's Dual Nature gives optimistic and still thoroughly scientific answers to each of these questions. The title of the book derives from the fact that in the author's theory time is equivalently expressed in two ways in conventional units: e.g. seconds (real time) and in imaginary numbers (imaginary time). They are in actuality one and the same thing: time. The author's equations all work beautifully but only if this is the case. The following review is by Professor of Applied Mathematics Xinfu Chen of the University of Pittsburgh. In the book the author first followed a traditional road: selecting the units and then invented a revolutionary method of representing length, mass, time on a single plane for the first time in history. He built the basic foundation which may result in simplification and important development of quantum mechanics in the future. The author's new sets of equations may shed some light for a new direction of development of quantum theory. Any theory associated with the author's fascinating time-length-action-mass plane should be very beautiful. Overall, this book can be considered as great in many aspects.

Physics Of Reality, The: Space, Time, Matter, Cosmos - Proceedings Of The 8th Symposium Honoring Mathematical Physicist Jean-pierre Vigiér Richard L Amoroso, Louis H Kauffman, Peter Rowlands, 2013-09-18 A truly Galilean class volume, this book introduces a new method in theory formation, completing the tools of epistemology. It covers a broad spectrum of theoretical and mathematical physics by researchers from over 20 nations from four continents. Like Vigiér himself, the Vigiér symposia are noted for addressing avant garde, cutting edge topics in contemporary physics. Among the six proceedings honoring J P Vigiér, this is perhaps the most exciting one as several important breakthroughs are introduced for the first time. The most interesting breakthrough in view of the recent NIST experimental violations of QED is a continuation of the pioneering work by Vigiér on tight bound states in hydrogen. The new experimental protocol described not only promises empirical proof of large scale extra dimensions in conjunction with avenues for testing string theory but also implies the birth of the field of unified field mechanics, ushering in a new age of discovery. Work on quantum computing redefines the qubit in a manner that the uncertainty principle may be routinely violated. Other breakthroughs occur in the utility of quaternion algebra in extending our understanding of the nature of the fermionic singularity or point particle. There are several other discoveries of equal magnitude making this volume a must-have acquisition for the library of any serious forward-looking researchers.

Duality of Time Mohamed Haj Yousef, 2018-01-01 The Duality of Time Theory is the result of more than two decades of ceaseless

investigation and searching through ancient manuscripts of concealed philosophies and mystical traditions comparing all that with the fundamental results of modern physics and cosmology until all the contradicting jigsaw pieces were put together into this brilliant portrait Without the overwhelming proofs and strong confirmations that accumulated over time it would have been impossible to pursue this long research path as it was extremely challenging to appreciate the unfathomable secret of time and the consequences of the ongoing perpetual creation of space that result from the Single Monad Model of the Cosmos The complex time geometry of the Duality of Time Theory explains how the physical dimensions of space are sequentially being re created in the inner levels of time which makes the outward time genuinely imaginary with respect to the inner real levels This is easily expressed in terms of the hyperbolic split complex numbers that characterize the Relativistic Lorentzian Symmetry This will have deep implications because space time has become naturally quantized in a way that explains and unites all the three principles of Relativity leading to full Quantum Field Theory of Gravity as well as explaining all the other fundamental interactions in terms of the new granular space time geometry This ultimate unification will solve many persisting problems in physics and cosmology The homogeneity problem for example will instantly cease since the Universe no matter how large it could be is re created sequentially in the inner time so all the states are updated and synchronized before they appear in the outer level that we encounter Furthermore the Duality of Time does not only unify all the fundamental interactions in terms of its genuinely complex time time geometry but it unifies this whole physical world with the two other even more fundamental domains of the psychical and spiritual worlds All these three conclusive and complementary realms are constructed on the same concept of space time geometry that together form one single absolute and perfectly symmetrical space This particular subject is treated at length in the Third Volume of this book series the Ultimate Symmetry which explores how the apparent physical and metaphysical multiplicity is emerging from the absolute Oneness of Divine Presence descending through four fundamental levels of symmetry ultimate hyper super and normal Among many other astonishing consequences this astounding conclusion means that the psychical world is composed of atoms and molecules that are identical with the physical world except that they are evolving in orthogonal time direction It may appear initially impossible to believe how the incorporeal worlds may have the same atomic structure as the physical world but it is more appropriate to say that physical structures are eventually incorporeal because they become various wave phenomena and energy interactions as soon as we dive into their microscopic level as it is now confirmed by Quantum Field Theories In the Duality of Time Theory since rigid space is created sequentially in the inner time energy may become negative imaginary and even multidimensional which simply means that all things in creation are various kinds of energy moments that are spreading on different intersecting dimensions of time so not only mass and energy are equivalent but also charge and all other physical and metaphysical entities are interconvertible types of energy including consciousness and information

Light Zoltán Néda,Madeea Axinciuc,2019-04-15 The book is aiming programmatically at showing that both in science and religious thinking the basic space time entity is ultimately built and defined by light In this sense the book is emphasizing the unique role of light in understanding the world around us The approach is based on the belief that science and religion represent two very different modes of addressing reality both of them being relevant to us as human beings The language of science and religion and the answers they each give to the same questions differ due to the elementary postulates on which they are built A dialogue and debate in the classical sense is therefore meaningless This is why the book has allowed the voice of Physics and the voice of the Philosophy of Religion to be heard in their distinctiveness and nobility Instead of endless polemics the work proposes to acknowledge with patience and respect the altera pars approach for the same overarching topics highlighting the complexity of both domains and on a transdisciplinary level pointing towards the complexity of our mind and reality The book is illustrated by Valentin Petridean The images mirror and enrich the rigorous game of the intellect illuminating it with sparks of vivid imagination
