Digital Remote Patient Monitoring in Neurodegenerative Diseases Graham Jones,Amit Khanna ,Diane Stephenson,2026-01-06

The development of sensitive miniature electronic digital health sensors has stimulated growth of a multi billion dollar consumer products for the health tech industry Devices like wrist and finger worn wearables smartphones specialized peripherals and home based IoMT devices are capable of utilizing these technologies coupled with associated algorithms to accurately measure vital signs cognitive functions and fine motor movements This now opens the opportunity for measuring subtle changes in chronic degenerative diseases using a suite of digital tools with the potential to detect a change within a reasonable time during the early course of the disease These slowly progressing conditions manifest clinical symptoms and functional impairment over a period of several years Thus deploying technologies to facilitate early diagnosis characterization and monitoring disease progression longitudinally might enable informed decisions on treatment care and early interventions They can also provide key data to underscore the efficacy of therapeutics designed to prevent delay or modify the course of the disease addressing an unmet need in this area and generating data of relevance to the regulatory authorities and Payors The need for use of such technologies is becoming acute as the rising prevalence of diseases such as Alzheimer s Parkinson s and multiple sclerosis represent an enormous societal economic and healthcare burden globally In this Research Topic we will highlight recent developments in remote patient monitoring derived from experts in the academy pharmaceutical industry government laboratories and research foundations Examples range from routine measurements of blood pressure heart rate variability and sleep cycles to more complex interrogation of acoustic oculomotor and ballistographic signals which can provide insight to disease states to enable early intervention Additionally specialized digital programs can give insight to cognitive state and function If captured longitudinally they can provide informative data on disease progression and classification A benefit of digital monitoring in the early stages of disease lies in the potential to explore disease preventing approaches during limited time periods of a clinical study and offer long term monitoring via registries and electronic health records Based on the considerable promise of these digital technologies we are delighted to showcase cutting edge advances and emerging directions in the field through this exciting collection which we cordially welcome authors to consider submitting to Potential topics could include but are not restricted to the following subject areas Use of digital technologies to facilitate early diagnosis characterization and monitoring of neurodegenerative disease Data driven approaches to interrogate the efficacy of symptomatic and disease modifying therapies Development of standards and metrics to guide registration validation and regulatory approaches Future remote monitoring environments from clinical studies to IoMT at home Ethical considerations around the capture storage transmission and ownership of patient captured data Clinical and real world evaluation of sensors and sensing technologies in neurodegenerative disease Progress in human factor engineering in the design of patient friendly

How to Use AI to Build Your Future (Not Just Do Your Homework) Ishu Anand Jaiswal, 2025-12-14 We are living through one of the most profound technological shifts in human history For the first time powerful intelligent systems capable of generating text code ideas and even strategies are available to every student creator and professional The arrival of Artificial Intelligence has not just changed the tools we use it has changed the very nature of learning working and building During my 18 years leading engineering teams at companies like Apple and Intuit I witnessed a transformation that few outside the industry fully understood the entry level job began to disappear Tasks once reserved for junior engineers writing boilerplate code formatting reports organizing meeting notes became automated AI systems started performing these activities faster cheaper and with increasing accuracy This wasn't simply a shift in technology it was a shift in expectations The graduates entering the workforce could no longer rely on being trained on the job They were expected to arrive ready to architect solutions not just follow instructions This book was born from that realization Students today stand at a crossroads On one side is the temptation to treat AI as a shortcut a tool to bypass effort generate assignments and complete tasks without learning On the other side lies an extraordinary opportunity to use AI as a cognitive amplifier a mentor a brainstorming partner and a force multiplier for creativity and innovation The difference between these two paths is not determined by technology it is determined by mindset The Architect's Mindset is a guide to the second path It teaches you how to think in systems write precise prompts verify information and use AI not as a crutch but as an accelerant You will learn how to manage AI the way seasoned engineering leaders manage talented but unpredictable interns leveraging their strengths while guarding against their weaknesses You will see how AI can elevate your research sharpen your reasoning accelerate your coding and prepare you for interviews and careers that did not exist a decade ago But this book is not merely about skill building It is about cultivating judgment ethics and intellectual ownership in a world where machines can produce fluent answers without understanding them It urges you to remain the pilot not the passenger when working with intelligent systems As you read approach each chapter with curiosity and courage Challenge your assumptions Experiment with new workflows Question everything including the AI itself Your education is no longer about remembering facts it is about mastering tools designing systems and building the mental discipline to navigate an era defined by intelligence both artificial and human If this book accomplishes anything I hope it helps you see this moment not as a threat but as an invitation An invitation to become the architect of your own future **Journal of the Photographic Society of London** ,1927 **The Photographic Journal** ,1927 Vols for 1853 include the transactions of the Royal Photographic Society of Great Britain
