**Book** Lyle F. Bachman, 2004-11-18 Many classroom teachers and applied linguists find statistical analyses of test results or number crunching either inaccessible or incomprehensible The primary purpose of this book is to make statistical analyses accessible to those who may need to use and interpret language tests

**Statistical Analyses for Language Assessment**

Lyle F. Bachman, 2004 **Statistical Analyses for Language Assessment Workbook and CD ROM** Lyle

Bachman, Antony Kunnan, 2005-04-07 This book enables practitioners to apply statistics effectively to the development and use of language assessments This is a Workbook and CD ROM pack which will support the main text Each chapter will offer activities to parallel the chapters in the book The activities are intended to provide readers with opportunities to work with and apply the concepts and procedures presented using datasets from language assessment research

**Statistical Analyses for Language Assessment Workbook** Lyle F. Bachman, 2005 **Statistical Methods in Language and Linguistic Research**

Pascual Cantos Gómez, 2013-01-01 The linguistic community tend to regard statistical methods or more generally quantitative techniques with a certain amount of fear and suspicion There is a feeling that statistics falls in the province of science and mathematics and such methods may destroy the magic of the literary text This book seeks to make quantitative methods and statistical techniques less forbidding and show how they can contribute to linguistic analysis and research It present some mathematical and statistical properties of natural languages and introduces some of the quantitative methods which are of the most value in working empirically with texts and corpora The various issues are illustrated with helpful examples from the most basic descriptive techniques to decision taking techniques and to more sophisticated multivariate statistical language models

**Statistics for Linguistics with R** Stefan Th. Gries, 2013-03-22 This book is the revised and extended second edition of *Statistics for Linguistics with R* The volume is an introduction to statistics for linguists using the open source software R It is aimed at students and instructors professors with little or no statistical background and is written in a non technical and reader friendly accessible style It first introduces in detail the overall logic underlying quantitative studies exploration hypothesis formulation and operationalization and the notion and meaning of significance tests It then introduces some basics of the software R relevant to statistical data analysis A chapter on descriptive statistics explains how summary statistics for frequencies averages and correlations are generated with R and how they are graphically represented best A chapter on analytical statistics explains how statistical tests are performed in R on the basis of many different linguistic case studies For nearly every single example it is explained what the structure of the test looks like how hypotheses are formulated explored and tested for statistical significance how the results are graphically

represented and how one would summarize them in a paper article A chapter on selected multifactorial methods introduces how more complex research designs can be studied methods for the study of multifactorial frequency data correlations tests for means and binary response data are discussed and exemplified step by step Also the exploratory approach of hierarchical cluster analysis is illustrated in detail The book comes with many exercises boxes with short think breaks and warnings recommendations for further study and answer keys as well as a statistics for linguists newsgroup on the companion website Just like the first edition it is aimed at students faculty and researchers with little or no statistical background in statistics or the open source programming language R It avoids mathematical jargon and discusses the logic and structure of quantitative studies and introduces descriptive statistics as well as a range of monofactorial statistical tests for frequencies distributions means dispersions and correlations The comprehensive revision includes new small sections on programming topics that facilitate statistical analysis the addition of a variety of statistical functions readers can apply to their own data a revision of overview sections on statistical tests and regression modeling a complete rewrite of the chapter on multifactorial approaches which now contains sections on linear regression binary and ordinal logistic regression multinomial and Poisson regression and repeated measures ANOVA and a new visual tool to identify the right statistical test for a given problem and data set The amount of code available from the companion website has doubled in size providing much supplementary material on statistical tests and advanced plotting

**Bilingualism and cognitive control** Judith F. Kroll, Ingrid Christoffels, Teresa Bajo, Research on bilingual language processing reveals an important role for control processes that enable bilinguals to negotiate the potential competition across their two languages The requirement for control that enables bilinguals to speak the intended language and to switch between languages has also been suggested to confer a set of cognitive consequences for executive function that extend beyond language to domain general cognitive skills Many recent studies have examined aspects of how cognitive control is manifest during bilingual language processing how individual differences in cognitive resources influence second language learning and performance and the range of cognitive tasks that appear to be influenced by bilingualism However not all studies demonstrate a bilingual advantage in all tasks that tap into cognitive control Indeed many questions are unanswered that are critical to our understanding of bilingual control What aspects of cognitive control are enhanced for proficient bilinguals How are individual differences in cognitive control related to language acquisition proficiency or professional translation skill How does the language environment affect concurrent processing How exactly does language control come about in tasks such as speech production switching between languages or translation When and how does inhibitory processing support language control The focus of this Research Topic is on executive control and bilingualism The goal is to have a broad scope that includes all of these issues We seek empirical contributions using different methodologies including behavioral computational and neuroscience approaches We also welcome theoretical contributions that provide detailed discussion of models or mechanisms that account for the relationship between bilingualism and cognitive control We aim to provide a platform for new contributions that represent a state of the art overview of approaches to cognitive control in bilingualism We hope that this Research Topic will enable the field to formulate more precise hypotheses and causal models on the relation between individual differences cognitive control and bilingual language processing
