This innovative class of materials has a major impact in many application domains such as optics electronics mechanics energy storage and conversion protective coatings catalysis sensing and nanomedicine. The properties of these materials do not only depend on the chemical structure and the mutual interaction between their nano scale building blocks but are also strongly influenced by the interfaces they share. This handbook focuses on the most recent investigations concerning the design control and dynamics of hybrid organic inorganic interfaces covering i characterization methods of interfaces ii innovative computational approaches and simulation of interaction processes iii in situ studies of dynamic aspects controlling the formation of these interfaces and iv the role of the interface for process optimization devices and applications in such areas as optics electronics energy and medicine      New York Court of Appeals.
