(highlight the answers as you find them):

The water cycle is the journey water takes as it goes from the land to the sky again and again. Condensation is when gas is changed to a liquid. Water then soaks into the soil. Runoff happens when water runs downhill from mountains into streams, rivers and lakes. A river is a moving body of water which flows into seas and oceans, whereas a lake is still and usually surrounded by land. Precipitation is another word for the process of rain. Snow and hail are also types of precipitation. When plants absorb water from the soil, the water moves from its stems to the leaves. This is called transpiration.
