Mahafza, 2005-03-09 An introduction to radar systems should ideally be self contained and hands on a combination lacking in most radar texts The first edition of Radar Systems Analysis and Design Using MATLAB provided such an approach and the second edition continues in the same vein This edition has been updated expanded and reorganized to include advances in t **Direct and Inverse Methods in Radar Polarimetry** W.M Boerner, Leonard A. Cram, William A. Holm, David E. Stein, Werner Wiesbeck, Wolfgang Keydel, Dino Giuli, Dag T. Gjessing, Frédéric A. Molinet, Hans Brand, 2013-11-09 This foreword deals exclusively with the planning organization and execution of the Workshop s scientific as well as cultural programs It is opened with a synopsis on how the global political changes that occurred immediately after the Workshop caused the delay in producing the proceedings followed by a brief exposition on need timeliness and importance of this second ARW in the field of electromagnetic imaging radar remote sensing and target versus clutter discrimination and an outline of the objectives An informal discussion about some of the organizational details a retrospective summary of events and a preview of the third workshop planned for 1993 September 19 25 is intended to recapture the spirit of this second NATO Advanced Research Workshop 1988 September 18 24 and will reveal how successful it was in comparison to the first of 1983 September 18 24 how its accomplishments may be appreciated and why a third and last workshop was requested by its participants to take place during 1993 September 19 25 *Synthetic Aperture Radar Polarimetry* Jakob J. van Zyl, 2011-10-14 This book describes the application of polarimetric synthetic aperture radar to earth remote sensing based on research at the NASA Jet Propulsion Laboratory JPL This book synthesizes all current research to provide practical information for both the newcomer and the expert in radar polarimetry The text offers a concise description of the mathematical fundamentals illustrated with many examples using SAR data with a main focus on remote sensing of the earth The book begins with basics of synthetic aperture radar to provide the basis for understanding how polarimetric SAR images are formed and gives an introduction to the fundamentals of radar polarimetry It goes on to discuss more advanced polarimetric concepts that allow one to infer more information about the terrain being imaged In order to analyze data quantitatively the signals must be calibrated carefully which the book addresses in a chapter summarizing the basic calibration algorithms The book concludes with examples of applying polarimetric analysis to scattering from rough surfaces to infer soil moisture from radar signals **Radar Polarimetry for Geoscience Applications** Fawwaz Tayssir Ulaby, Charles Elachi, 1990 Offers the only consolidated reference on radar polarimetry design analysis and application and explains the most recent development in polarization system design and application Illustrated with 150 figures 10 tablets and 9 full color SAR images **Radar Polarimetry** Siow Yin Yong, 2004-12 Radar polarimetry is a recent development seeing active research only in the last few decades The phenomenon that optimal maximal power reflected fields exist in both the co polarized and cross polarized channels of the receiving radar antenna was first introduced by Kennaugh and Huynen

Current research efforts focus on target scattering matrices and relating them to physical attributes of the target. This thesis provides a comprehensive survey of the polarimetry theories that have been put forth by various researchers to characterize, manipulate, and optimize target radar returns via polarization states. One such theory is the Target Decomposition (TD) theorem that seeks to decompose the target returns into individual scattering mechanisms. The topic of optimization of polarization states of the incident field for maximizing power return is also examined. Two models are implemented in Matlab to verify and demonstrate these polarimetry theories. The first model uses TD theorems to simulate foliage clutter and study its effect on the polarization of the incident electric field. A simulated static dihedral target is introduced and its effect on wave polarization is also simulated. The second model studies optimization of polarization states. Both models are able to produce the expected results for known canonical targets.

Polarimetric Doppler Weather Radar V. N. Bringi, V. Chandrasekar, 2001-08-30 This 2001 book provides a detailed introduction to the principles of Doppler and polarimetric radar focusing in particular on their use in the analysis of weather systems. The design features and operation of practical radar systems are highlighted throughout the book in order to illustrate important theoretical foundations. The authors begin by discussing background topics such as electromagnetic scattering, polarization, and wave propagation. They then deal in detail with the engineering aspects of pulsed Doppler polarimetric radar, including the relevant signal theory, spectral estimation techniques, and noise considerations. They close by examining a range of key applications in meteorology and remote sensing. The book will be of great use to graduate students of electrical engineering and atmospheric science as well as to practitioners involved in the applications of polarimetric radar systems.

MATLAB Simulations for Radar Systems Design Bassem R. Mahafza, Atef Elsherbeni, 2003-12-17 Simulation is integral to the successful design of modern radar systems, and there is arguably no better software for this purpose than MATLAB. But software and the ability to use it does not guarantee success. One must also understand radar operations and design philosophy. Know how to select the radar parameters to meet the design requirements. Be able to perform detailed trade-off analysis in the context of radar sizing, modes of operation, frequency selection, waveforms, and signal processing. Develop loss and error budgets associated with the design. MATLAB Simulations for Radar Systems Design teaches all of this and provides the M-files and hands-on simulation experience needed to design and analyze radar systems. Part I forms a comprehensive description of radar systems, their analysis, and the design process. The authors' unique approach involves a design case study introduced in Chapter 1 and followed throughout the text. As the treatment progresses, the complexity increases and the case study requirements are adjusted accordingly. Part II presents a series of chapters, some authored by other experts in the field, on specialized radar topics important to a full understanding of radar systems design and analysis. A comprehensive set of MATLAB programs and functions support both parts of the book and are available for download from the CRC Press Web site.
