**Environmental Informatics** Hans-Joachim Bungartz, Dieter Kranzlmüller, Volker Weinberg, Jens Weismüller, Volker Wohlgemuth, 2018-11-03 This book presents the latest findings and ongoing research in the field of environmental informatics. It addresses a wide range of cross cutting activities such as efficient computing, virtual reality, disruption management, big data, open science and the internet of things and showcases how these green information communication technologies ICT can be used to effectively address environmental and societal challenges. Presenting a selection of extended contributions to the 32nd edition of the International Conference EnviroInfo 2018 at the Leibniz Supercomputing Centre in Garching near Munich, it is essential reading for anyone looking to expand their expertise in the area. *Advances in Human Aspects of Transportation: Part I* Neville Stanton, Giuseppe Di Buccianico, Andrea Vallicelli, Steven Landry, 2021-07-19

Human Factors and Ergonomics have made a considerable contribution to the research design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers, understanding of distraction and how to avoid it, environmental concerns in vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis and development. The issues facing engineers, scientists and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research. It is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system. *Government-wide Index to Federal Research & Development Reports*, 1965 **WMO Bulletin** World Meteorological Organization, 2014 *Space Insurance: International Legal Aspects* Katarzyna Malinowska, 2017-03-15

Insurance related to outer space activities has been around since the 1960s but has become vastly more significant with the increased commercial use of satellites. This book focuses on the legal aspects of space insurance in the contractual context, analysing space risk as well as the insurance terms used on the market. It offers the first in depth coverage both practical and theoretical of space insurance from an international law perspective. Attending throughout to the important and problematic distinction between the space segment upstream and ground segment downstream in space law, this book deals comprehensively with such issues and topics as the following: the main hazards relating to space activities, the impact of new

space technologies on the level of risk and insurance the differing types of risks attributable to various entities in the context of insurable interest aspects of the space risk allocation regimes and risk assessment the impact of the five space treaties the Outer Space Treaty the Liability Convention the Rescue Agreement the Registration Convention and the Moon Agreement on the subject and scope of insurance coverage the advent of suborbital flight commercial human space flight and space tourism in the context of emerging insurance risks the problem of space debris contractual aspects of space activities affecting the space insurance risks basic notions such as outer space space object in the context of space activities and related insurance coverage basic insurance principles and their operation in the space insurance and the adjustment of losses and the settlement of disputes in space insurance The author emphasises the need to understand the various insurance risks facing particular types of commercial space activities including pre launch launch transportation spaceflight satellite communications satellite navigation satellite remote sensing and space station operation Satellites are increasingly a vital part of many daily activities of contemporary society and the Earth's orbit is becoming ever more crowded heightening the risks of collision damage and claims This thoroughly researched book will therefore be extremely useful to lawyers policymakers and academics tasked with defining the scope of insurance coverage that accurately mirrors technological contractual and legal reality Its practical aspect will be of extraordinary value to insurance lawyers underwriters and brokers
