Trends and Challenges in Maritime Energy Management Aykut I. Ölcer, Momoko Kitada, Dimitrios Dalaklis, Fabio Ballini, 2018-05-03 This book provides an overview of contemporary trends and challenges in maritime energy management. MEM Coordinated action is necessary to achieve a low carbon and energy efficient maritime future and MEM is the prevailing framework aimed at reducing greenhouse gas emissions resulting from maritime industry activities. The book familiarizes readers with the status quo in the field and paves the way for finding solutions to perceived challenges. The 34 contributions cover six important aspects: regulatory framework, energy efficient ship design, energy efficient ship and port operation, economic and social dimensions, alternative fuels and wind assisted ship propulsion, and marine renewable energy. This pioneering work is intended for researchers and academics as well as practitioners and policymakers involved in this important field.

Advances in Human Aspects of Transportation: Part I Neville Stanton, Giuseppe Di Bucchianico, Andrea Vallicelli, Steven Landry, 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research design, development, operation, and analysis of transportation systems, which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers, understanding of distraction and how to avoid it, environmental concerns in vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis and development. The issues facing engineers, scientists and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries, for instance, by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research; it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment but as embedded issues that can only be understood as a part of an overall system.

Human Factors in Transportation Giuseppe Di Bucchianico, Andrea Vallicelli, Neville A. Stanton, Steven J. Landry, 2016-09-19 More and more, the most traditional and typical applied ergonomics issues of the activities related to sea, shipping, vehicle driving and flying are required to deal with some emerging topics related to the growing automatism and manning reduction, the ICT's advances and pervasiveness and the new demographic and social phenomena such as aging or multiculturalism. With contributions from expert researchers, professionals and doctoral students from a wide number of countries such as Australia,

These disasters lead to substantial loss of life, livelihoods and community assets which not only threatens the pace of socio economic development but also undo hard earned gains. Extreme events and disasters such as floods, droughts, heat, fire, cyclones and tidal surges are known to be exacerbated by environmental changes including climate change, land use changes and natural resource degradation.
