Bigelow Aerospace Erik Seedhouse,2014-09-25 Here for the first time you can read how a space technology start up is pioneering work on expandable space station modules how Robert Bigelow licensed the TransHab idea from NASA and how his company developed the technology for more than a decade how very soon a Bigelow expandable module will be docked with the International Space Station At the core of Bigelow s plan is the inflatable module technology Tougher and more durable than their rigid counterparts these inflatable modules are perfectly suited for use in the space where Bigelow plans to link them together to form commercial space stations This book describes how this new breed of space stations will be built and how the link between Bigelow Aerospace NASA and private companies can lead to a new economy a space economy Finally the book touches on Bigelow s aspirations beyond low Earth orbit plans that include the landing of a base on the lunar surface and the prospect of missions to Mars

Survival and Sacrifice in Mars Exploration Erik Seedhouse,2015-03-26 With current technology a voyage to Mars and back will take three years That s a lot of time for things to go wrong But sooner or later a commercial enterprise will commit itself to sending humans to Mars How will the astronauts survive Some things to consider are ith current technology a voyage to Mars and back will take three years That s a lot of time for things to go wrong But sooner or later a commercial enterprise will commit itself to sending humans to Mars How will the astronauts survive Some things to consider are Who decides what medical resources are used for whom Who decides what medical resources are used for whom What is the relative weight of mission success and the health of the crew What is the relative weight of mission success and the health of the crew Do we allow crewmembers to sacrifice their lives for the good of the mission Do we allow crewmembers to sacrifice their lives for the good of the mission And what if a crewmember does perish Do we store the body for return to Earth or give the member a burial in space Questions like these and hundreds of others have been explored by science fi ction but scant attention has been paid by those designing missions Fortunately the experience gained in polar exploration more than 100 years ago provides crews and mission planners with a framework to deal with contingencies and it is this that forms the core of this book Why the parallels between polar and space exploration Because polar exploration

offers a better analogy for a Mars mission today than those invoked by the space community. Although astronauts are routinely compared to Lewis and Clark, Mars-bound astronauts will be closer in their roles to polar explorers. And as much as space has been described as a New Frontier, Mars bears greater similarity to the polar regions which is why so much can be learned from those who ventured there. And what if a crewmember does perish? Do we store the body for return to Earth or give the member a burial in space? Questions like these and hundreds of others have been explored by science fiction but scant attention has been paid by those designing missions. Fortunately, the experience gained in polar exploration more than 100 years ago provides crews and mission planners with a framework to deal with contingencies and it is this that forms the core of this book. Why the parallels between polar and space exploration? Because polar exploration offers a better analogy for a Mars mission today than those invoked by the space community. Although astronauts are routinely compared to Lewis and Clark, Mars-bound astronauts will be closer in their roles to polar explorers. And as much as space has been described as a New Frontier, Mars bears greater similarity to the polar regions which is why so much can be learned from those who ventured there.

Suborbital Erik Seedhouse, 2014-01-27. The nascent commercial suborbital spaceflight industry will soon open the space frontier to commercial astronauts, payload specialists, scientists, and of course tourists. This book describes the tantalizing science opportunities to be offered when suborbital trips become routine within the next 12 to 18 months. It describes the difference in training and qualification necessary to become either a spaceflight participant or a fully fledged commercial suborbital astronaut and it describes the vehicles this new class of astronauts will use. Anticipation is on the rise for the new crop of commercial suborbital spaceships that will serve the scientific and educational market. These reusable rocket-propelled vehicles are expected to offer quick, routine, and affordable access to the edge of space along with the capability to carry research and educational crew members. Yet to be demonstrated is the hoped-for flight rates of suborbital vehicles. Quick turnaround of these craft is central to realizing the profit-making potential of repeated sojourns to suborbital heights. As this book outlines, vehicle builders still face rigorous shake-out schedules, flight safety hurdles, as well as extensive trial runs of their respective craft before suborbital space jaunts become commonplace. The book examines some of these cash-and-carry suborbital craft under development by such groups as Blue Origin, Masten Space Systems, Virgin Galactic, and XCOR Aerospace and describes the hurdles the space industry is quickly overcoming en route to the industry developing into a profitable economic entity. Seedhouse also explains how the commercial suborbital spaceflight industry is planning and preparing for the challenges of marketing and financing and how it is marketing the hiring of astronauts. It examines the role of commercial operators as enablers accessing the suborbital frontier and how a partnership with governments and the private sector will eventually permanently integrate the free market's innovation of commercial suborbital space activities.

Manned Spaceflight Britannica Educational Publishing, 2009-10-01. Space travel is a familiar concept. Such was not the case in the early 20th century when the United States and the former Soviet Union were locked in a race to send humans into

Virgin Galactic Erik Seehouse,2015-02-23 Thirty years ago when Sir Richard Branson called up Boeing and asked if they had a spare 747 few would have predicted the brash entrepreneur would so radically transform the placid business of air travel But today Branson flies airlines on six continents employs hundreds of jets and in 2014 was predicting that his spaceship company Virgin Galactic would soon open the space frontier to commercial astronauts payload specialists scientists and space tourists With more than 600 seats sold at 250 000 each what started off as a dream to send people just for the excitement to look back and marvel at Earth was on the cusp of finally being turned into a business Then on October 21 2014 tragedy struck SpaceShipTwo was on its most ambitious test flight to date Seconds after firing its engine Virgin Galactic's spaceship was breaking through the sound barrier In just the three seconds that it took for the vehicle to climb from Mach 0.94 to Mach 1.02 co pilot Mike Alsbury made what many close to the event believe was a fatal mistake that led to his death and the disintegration of SpaceShipTwo Miraculously the pilot Peter Siebold survived the 16 km fall back to Earth Soon after the event Branson vowed to continue his space tourism venture in spite of this Already a second SpaceShipTwo is being built and ticket holders eagerly await the day when Virgin Galactic offers quick routine and affordable access to the edge of space This book explains the hurdles Virgin Galactic had and still has to overcome en route to developing suborbital space travel as a profitable economic entity and describes the missions that will be flown on board SpaceShipTwo Mk II including high altitude science studies astronomy life sciences and microgravity physics
