You'll learn about key features to look for in a backup app and find tips on using several popular tools. You'll also discover the pros and cons of cloud backup services and get help choosing the right one. An online appendix covers dozens of apps and services. Shop for hardware. Once you've selected hardware and software you'll need to know how to make your first backup, set up your backups to run unattended and test them regularly to make sure they're working as they should. Recover lost data. Backing up data can be easy but restoring it is often more challenging. When you discover that data is missing whether due to a disk error, theft or a simple mistake you need to know the exact steps needed to recover it and get back to work as soon as possible.

you how *Tidy Finance with Python* Christoph Scheuch, Stefan Voigt, Patrick Weiss, Christoph Frey, 2024-07-12 This textbook shows how to bring theoretical concepts from finance and econometrics to the data. Focusing on coding and data analysis with Python we show how to conduct research in empirical finance from scratch. We start by introducing the concepts of tidy data and coding principles using pandas, numpy and plotnine. Code is provided to prepare common open source and proprietary financial data sources (CRSP, Compustat, Mergent, FISD, TRACE) and organize them in a database. We reuse these data in all the subsequent chapters which we keep as self-contained as possible. The empirical applications range from key concepts of empirical asset pricing, beta estimation, portfolio sorts, performance analysis, Fama French factors to modeling and machine learning applications (fixed effects estimation, clustering, standard errors, difference in difference estimators, ridge regression, Lasso, Elastic net, random forests, neural networks) and portfolio optimization techniques. Key Features: Self-contained chapters on the most important applications and methodologies in finance which can easily be used for the reader's research or as a reference for courses on empirical finance. Each chapter is reproducible in the sense that the reader can replicate every single figure, table or number by simply copying and pasting the code we provide. A full-fledged introduction to machine learning with scikit-learn based on tidy principles to show how factor selection and option pricing can benefit from Machine Learning methods. We show how to retrieve and prepare the most important datasets (financial economics, CRSP and Compustat) including detailed explanations of the most relevant data characteristics. Each chapter provides exercises based on established lectures and classes which are designed to help students to dig deeper. The exercises can be used for self-studying or as a source of inspiration for teaching exercises.
