available for demanding graphics and game applications CUDA now brings this valuable resource to programmers working on applications in other domains including science engineering and finance No knowledge of graphics programming is required just the ability to program in a modestly extended version of C CUDA by Example written by two senior members of the CUDA software platform team shows programmers how to employ this new technology The authors introduce each area of CUDA development through working examples After a concise introduction to the CUDA platform and architecture as well as a quick start guide to CUDA C the book details the techniques and trade offs associated with each key CUDA feature You ll discover when to use each CUDA C extension and how to write CUDA software that delivers truly outstanding performance Major topics covered include Parallel programming Thread cooperation Constant memory and events Texture memory Graphics interoperability Atomics Streams CUDA C on multiple GPUs Advanced atomics Additional CUDA resources All the CUDA software tools you ll need are freely available for download from NVIDIA [http://developer.nvidia.com/object/cuda\\_by\\_example.html](http://developer.nvidia.com/object/cuda_by_example.html)

*GPU Powered VDI* Jan Meier, 2018-06-21 User demands on the systems have risen continuously in recent years In addition more and more software products especially the operating systems Windows themselves no longer calculate the graphic representation on the CPU Central Processing Unit Instead they calculate it on the GPU Graphics Processing Unit optimized for this purpose If no GPU is available the calculation continues to be performed on the CPU Especially when using virtual desktops i e desktops that are provided in the data center the lack of GPU is often a clear disadvantage compared to classic PCs In addition the load on the corresponding servers is getting significantly higher and the number of users per physical server decreases The costs per user increase The industry recognized this disadvantage several years ago and introduced the GPU Pass through technology A physical graphics card is assigned to a virtual machine This can then use the full power of the graphics card but each virtual machine requires its own graphics card The costs per user increase To resolve this issue NVIDIA has released GRID technology This makes it possible for several virtual machines to share a graphics card but still maintain full performance similar to what already happens in all virtual environments with the CPU You will learn what to consider when planning a v GPU environment and learn step by step how to deploy it with Citrix and NVIDIA This is followed by monitoring the environment and correcting known errors Contents excerpt Plan v GPU Types License Variants HDX HDX 3D Pro Do Graphics Cards License Server Virtual Delivery Agent Check GPU Monitoring NVIDIA SMIGPU Profiler Act System Load 3D connexion Devices Troubleshooting
