Popović, Rainer Kulms, 2024-10-08 Online platforms and their ecosystems are the cornerstone of the digital economy They have brought forth positive network effects But they are also known for their information asymmetries their potential for market failures and their problematic relationship with data protection law This volume provides a detailed analysis of the current process of repositioning online platforms in the digital economy as regulators express concerns about the evolution from mere intermediaries to gatekeepers The exclusive reliance on competition law instruments has proven to be incapable of coping with cases of platforms abusing their market power Therefore the book explores the European Union's new approach to digital markets consisting in the adoption or drafting of new legislative instruments such as the Digital Markets Act Digital Services Act Proposal of AI Act Proposal of Data Act Proposal of Data Governance Act The EU's emphasis on new regulatory ex ante instruments as in the Digital Markets Act calls for an assessment of their overlap or their interface with existing supranational and national competition rules The book transcends mere competition law thinking by exploring the status of online platforms from the perspective of trade law rules unfair competition law data protection rules and intellectual property law But in view of the global reach of online platforms the risks of a jurisdiction wise approach with conflicting regulatory strategies are all too clear The volume therefore includes comparative studies on Australia and the USA The potential impact of regulatory policy choices will also be assessed from the economic perspective The book's message is not be confined to researchers and academics It is also of great importance to practitioners in the digital sector who stand to benefit from the analysis of the law of online platforms undertaken by a working group of renowned authors coming from different jurisdictions Containing Big Tech Tom Kemp, 2023-08-22 The path forward to rein in online surveillance AI and tech monopolies Technology is a gift and a curse The five Big Tech companies Meta Apple Amazon Microsoft and Google have built innovative products that improve many aspects of our lives But their intrusiveness and our dependence on them have created pressing threats to our civil rights economy and democracy Coming from an extensive background building

Silicon Valley based tech startups Tom Kemp eloquently and precisely weaves together the threats posed by Big Tech the overcollection and weaponization of our most sensitive data the problematic ways Big Tech uses AI to process and act upon our data the stifling of competition and entrepreneurship due to Big Tech s dominant market position This richly detailed book exposes the consequences of Big Tech s digital surveillance exploitative use of AI and monopolistic and anticompetitive practices It offers actionable solutions to these problems and a clear path forward for individuals and policymakers to advocate for change By containing the excesses of Big Tech we will ensure our civil rights are respected and preserved our economy is competitive and our democracy is protected

Barba-Kay,2023-05-11 There no longer seems any point to criticizing the internet We indulge in the latest doom mongering about the evils of social media on social media We scroll through routine complaints about the deterioration of our attention spans We resign ourselves to hating the internet even as we spend much of our waking lives with it Yet our unthinking surrender to its effects to the ways it recasts our aims and desires is itself digital technology s most powerful achievement A Web of Our Own Making examines how online practices are reshaping our lives outside our notice Barba Kay argues that digital technology is a natural technology a technology so intuitive as to conceal the extent to which it transforms our attention He shows how and why this technology is reconfiguring knowledge culture politics aesthetics and theology The digital revolution is primarily taking place not in Silicon Valley but within each of us [Advances in Longitudinal HCI](#)

[Research](#) Evangelos Karapanos,Jens Gerken,Jesper Kjeldskov,Mikael B. Skov,2021-08-11 Longitudinal studies have traditionally been seen as too cumbersome and labor intensive to be of much use in research on Human Computer Interaction HCI However recent trends in market legislation and the research questions we address have highlighted the importance of studying prolonged use while technology itself has made longitudinal research more accessible to researchers across different application domains Aimed as an educational resource for graduate students and researchers in HCI this

book brings together a collection of chapters addressing theoretical and methodological considerations and presenting case studies of longitudinal HCI research. Among others, the authors discuss the theoretical underpinnings of longitudinal HCI research such as when a longitudinal study is appropriate, what research questions can be addressed, and what challenges are entailed. In different longitudinal research designs, reflect on methodological challenges in longitudinal data collection and analysis such as how to maintain participant adherence and data reliability when employing the Experience Sampling Method in longitudinal settings or how to cope with data collection fatigue and data safety in applications of autoethnography and autobiographical design which may span from months to several years. Present a number of case studies covering different topics of longitudinal HCI research from slow technology to self-tracking to mid-air haptic feedback and crowdsourcing.

A new era of Value Selling Thomas Menthe, 2019-04-04. With this book, Thomas Menthe provides new insights into the era of value selling, which has been the Number 1 method in selling complex products and services. Today, customers are expecting more while paying less, and the value of your offer is defined by the customer, not by the seller. Data is the new oil; the new digital age allows different ways with technology like machine learning to better analyze customer journeys, get insights, predict behaviors, and personalize communication to improve customer retention. Digitalization will change the buying behavior much more towards e-commerce and self-service consultation with the support of sales robots. Value can be created from data, which needs to be structured, analyzed, and used for the individual customer engagement. Does this mean the end of the sales representative and solution sales? Value is not based solely on product dimensions; much more emotional value created counts during the decision-making process. The new era of value selling explains how value can be made tangible by the value quotient and ways to generate rational and emotional ROI for customers through story telling and relationship benefits. Value is always first on the buyer's mind, and the new value selling concept will dramatically improve your business and show how to respond to the customer of tomorrow. Thomas Menthe, MBA, is a sales expert, experienced seller, recognized speaker, and author of many publications about customer value, new ways of selling, selling strategy, leadership, and coaching. His best-selling book *Kundennutzen* has sold thousands of copies, and others are available in their 4th edition. He served global companies like Bearing Point, Canon, Carlsberg, Cisco Systems, Global Knowledge, KWS, Microsoft, RIM, Xerox, and others.
