**Waste Production and Utilization in the Metal Extraction Industry** Sehliselo Ndlovu, Geoffrey S. Simate, Elias Matinde, 2017-06-27 Increasingly stringent environmental regulations and industry adoption of waste minimization guidelines have thus stimulated the need for the development of recycling and reuse options for metal related waste. This book therefore gives an overview of the waste generation, recycle and reuse along the mining beneficiation, extraction, manufacturing and post consumer value chain. This book reviews current status and future trends in the recycling and reuse of mineral and metal waste and also details the policy and legislation regarding the waste management, health and environmental impacts in the mining beneficiation, metal extraction and manufacturing processes. This book is a useful reference for engineers and researchers in industry, policymakers and legislators in governance and academics on the current status and future trends in the recycling and reuse of mineral and metal waste. Some of the key features of the book are as follows:

- Holistic approach to waste generation, recycling and reuse along the minerals and metals extraction.
- Detailed overview of metallurgical waste generation.
- Practical examples with complete flow sheets, techniques and interventions on waste management.
- Integrates the technical issues related to efficient resources utilization with the policy and regulatory framework.
- Novel approach to addressing future commodity shortages.

*Commerce Business Daily*, 1998-05    [Green Jobs for Sustainable Development](#)

Ana-Maria Boromisa, Sanja Tišma, Anastasya Ležaić, 2015-06-26 A green economy must be built on green jobs, the kind of employment that is low carbon intended to reduce energy use and expected to restore environmental quality. But attempts to define exactly what a green job is have led to varied and often contradictory answers. There are many unresolved questions including whether we consider jobs in the nuclear fuel industry to be green jobs. Or is a worker at a glass making company which supplies the glass for the solar photovoltaic industry doing a green job given that glass making is a dirty industry? This book deals with the relationship between green concepts, green jobs, green economy, green growth and sustainable development. It examines to which extent creation of green jobs supports overall economic development as opposed to creation of elitist jobs and greenwashing. In order to do so, general conceptual frameworks for green jobs, green economy, green growth and green policy are presented as well as their implementation in ten countries selected among the Group of Twenty. The selection includes advanced the European Union, the United States of America, Australia, Canada, Republic of Korea, Japan and developing countries Mexico, China, Turkey and Brazil. The analysis presented in this book shows that although green concept is well intentioned, its implementation depends on local circumstances, economic, political and social. Developed countries perceive green growth as a way to create new markets and demand while developing countries rely more on labor intensive growth and less expensive green jobs. Thus, greening the economy does not diminish differences between rich and poor. This book is suitable for those who study and work in Ecological Economics, Sustainable Development and Labor Economics.
