The Politics of Climate Change Knowledge Nowrin Tabassum, 2022-03-03. This book addresses political knowledge of climate change and its relation to labelling people affected by climate change either as climate refugees or as climate change-induced displaced people or migrants. By questioning the knowledge of climate change and subsequent labelling of people, this book will spark debate in studies of global climate politics and transnational policy networks. Rather than considering the issue of climate change as a given phenomenon, the author explores how the politicized knowledge of climate change has been produced in international negotiations and how that knowledge is transmitted from global forums to local country levels via climate change action plans and resilience projects. This book introduces the concept of multi-scalar knowledge brokers (MKBs), individual actors who work at multiple levels: local, national, and international, to transmit the knowledge of climate change from global level to local level. The author uses the primary case study of Bangladesh to demonstrate how the dominant actors in global climate politics—the Intergovernmental Panel on Climate Change (IPCC), the United Nations Framework Convention on Climate Change (UNFCCC), and the World Bank—as well as the USA and the UK interact with the government and local NGOs in Bangladesh regarding transmitting the knowledge of climate change, labelling the uprooted people, and implementing resilience projects. This book will be of interest to students, scholars, and practitioners of international relations, environmental politics, climate change studies, political ecology, political geography, and migration and displacement studies. Social Cognition, Motivation, and Interaction: How Do People Respond to Threats in Social Interactions? Eva Jonas, Christina Mühlberger, 2018-01-12. If we want to understand people's responses to threats in social interactions, we can distinguish between three levels of analysis. On a social level of analysis, we can describe people's interpersonal behavior; on a cognitive level, we can identify corresponding information processing mechanisms; and on a neural level, we can specify neural systems which underlie these processes. In this Research Topic, we want to present research connecting these three levels of analysis and propose their functional interconnection in social interaction. We propose that threats in social interactions activate basic motivational processes which manifest in neural processes related to behavioral inhibition vs. activation in a social situation. This shapes our attention to new information and affects our cognitions about social identities, belief systems, and worldviews. These changes in social cognition in turn affect people's

behavior in social interactions and lead to corresponding reactions on behalf of the interaction partner. Thus we assume that people's reactions to threat in interactions can be described as sequences of broader attentional processes resulting from basic motivational tendencies leading to specific social cognitions and subsequent behavior within social interactions. We can analyze this sequence in order to contribute to a better understanding of social interactions. The three levels of analyses—social, cognitive, and neural—shed light on social interactions from different angles. On the social level we can analyze how the behaviors of the interaction partners mutually affect each other and how this is accompanied by specific cognitive, emotional, and motivational processes. On the cognitive level we can analyze people's perception of a social situation leading to attentional and reasoning processes with regard to their interaction partner's, which may be accompanied by certain emotional and motivational processes and determines the behavior towards the partner's. Finally we can focus on the neural mechanisms underlying cognitive, emotional, and motivational processes in social interactions.

International Plant Proteomics Organization (INPPO)

World Congress 2014 Joshua L. Heazlewood, Jesús V. Jorrín-Novo, Ganesh Kumar Agrawal, Silvia Mazzuca, Sabine Lüthje, 2017-02-08 The field of proteomics has advanced considerably over the past two decades. The ability to delve deeper into an organism's proteome, identify an array of post-translational modifications, and profile differentially abundant proteins has greatly expanded the utilization of proteomics. Improvements to instrumentation in conjunction with the development of these reproducible workflows have driven the adoption and application of this technology by a wider research community. However, the full potential of proteomics is far from being fully exploited in plant biology, and its translational application needs to be further developed. In 2011 a group of plant proteomic researchers established the International Plant Proteomics Organization (INPPO) to advance the utilization of this technology in plants as well as to create a way for plant proteomics researchers to interact, collaborate, and exchange ideas. The INPPO conducted its inaugural world congress in mid-2014 at the University of Hamburg, Germany. Plant proteomic researchers from around the world were in attendance, and the event

marked the maturation of this research community The Research Topic captures the opinions ideas and research discussed at the congress and encapsulates the approaches that were being applied in plant proteomics Pharmacotherapy: A Pathophysiologic Approach, Tenth Edition Joseph T.
