

IGNITION SYSTEM

SPARK PLUGS - The spark plugs should be removed every 100 hours of operation, cleaned, gapped every .010" and the points replaced. The point gap should be set from .020" to .025". When the adjustment is being the opposite electrode, lower lead must be checked.

Lead testing of spark plugs is one of the most spark plug problems. This does not mean the spark plug is defective but indicates the plug needs more frequent cleaning and electrode adjustment.

CAUTION: Failure to remove spark plugs at recommended, causes a serious interference to be placed on distributor.

For heavy loads use Amalite A7, A8, A9 or Champion 3-6. For light and medium loads and low grade fuel, all leads use Amalite A-7, A8, A9 or Champion 3-11. Intermediate plugs are charcoal fired and cause poor engine performance.

Spark plug gap should be set properly and no side wall scoring resulting in heavy leads and loss of power.

Gap too narrow will cause misfiring, poor idling and engine to die at slow speed.

The spark plugs and cables should be maintained in good condition and free of dirt and grease.

DISTRIBUTOR - To time the distributor, crank engine until No. 1 piston is approaching top center on its compression stroke and then center mark appears in center of inspection opening on bottom of clock housing.

The compression stroke of No. 1 piston can be determined by inserting the spark plug and placing thumb in spark plug hole. Crank slowly until air is forced past thumb. The moment such resistance will be very near the inspection opening of this timing. Thumb still removed, disregard the "0" or reference mark.

Remove cover and fan cap. Turn rotor to position as shown (toward primary lead terminal). Place in rotating location with primary lead terminal to rear, rotate distributor in opposite direction of rotor rotation or clockwise clockwise until points

just break. Remove rotor, replace fan shield, rotor and distributor cap. Place No. 1 spark plug wire directly above rotor. Pressed around distributor clockwise No. 1, 2 and 3. Place coil wire in center. When checking timing with timing light the spark will occur when three marks in center of inspection opening when engine is above 1000 r.p.m.

Point Gap: The point gap should be .010" and is set by turning engine until the contact points are at their widest position or with it on highest side of cam. If not .010" (check with feeler gauge) loosen the two screws in the fixed point and turn cap until this gap is obtained. After tightening screws recheck point gap.

ELECTRICAL SYSTEM

AMMETER - The ammeter indicates the charging or discharging rate of battery. If ammeter should indicate discharge with lights off, disconnect the battery cable, to prevent the discharge of battery, until the difficulty is located and corrected. Such a condition is usually caused by a worn or frayed wire making a short circuit or by internal relay points being stuck together.

If ammeter fails to show a charging rate one of the following may be the cause:

1. Loose or corroded wire connections.
2. Broken wires.
3. Faulty ammeter.
4. Only one generator brushes or commutator.
5. Worn generator brushes.

Commutator and brushes can be cleaned with grade "00" sandpaper. Do not use emery cloth.

LIGHT SWITCH & GENERATOR CONTROL - The generator has two charging rates. These are controlled by the light switch.

When the light switch is pushed all the way on, the lights are off and the charging rate is about 3 amperes. When the switch is pulled out to first notch the lights are on and the charging rate remains about 3 amperes. When the light switch is pulled all the way out the lights are off and the charging rate is increased to about 10 to 12 amperes. The high rate of charge should only be used when the battery is in a partially discharged condition. In most tractor operations the trend will be to overcharge the battery.

FUSE - The light circuit is provided with a 20 ampere fuse. This fuse is located on the inside of the instrument box.

LIGHTS - The head lights are adjustable in up and down and may be adjusted up or down, by loosening the retaining thumb screw and adjusting the light to the desired position.
