Weather And Climate Iscience:

I-science I' 2006 Ed. , The Change in the Weather William Kenneth Stevens,2001 Explains the unusual weather of the past few years in the context of a broader escalation of climatic extremes tracing the impact of climate on human societies

Firmament Simon Clark,2022-01-27 Compelling Clark s enthusiasm shines through on every page Sunday Times An engaging and lively history Financial Times _____ A thin invisible layer of air surrounds the Earth sustaining all known life on the planet and creating the unique climates and weather patterns that make each part of the world different In Firmament atmospheric scientist and science communicator Simon Clark offers a rare and accessible tour of the ins and outs of the atmosphere and how we know what we know about it From the workings of its different layers to why carbon dioxide is special from pioneers like Pascal to the unsung heroes working in the field to help us understand climate change Firmament introduces us to an oft overlooked area of science and not only lays the ground work for us to better understand the debates surrounding the climate today but also provides a glimpse of the future that is possible with this knowledge in hand

Earth Science and Applications from Space National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on the Assessment of NASA's Earth Science Program,2012-09-03 Understanding the effects of natural and human induced changes on the global environment and their implications requires a foundation of integrated observations of land sea air and space on which to build credible information products forecast models and other tools for making informed decisions The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system NASA responded favorably and aggressively to this survey embracing its overall recommendations for Earth observations missions technology investments and priorities for the underlying science As a result the science and applications communities have made significant progress over the past 5 years However the Committee on Assessment of NASA s Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended principally because the required budget was not achieved Exacerbating the budget shortfalls NASA Earth science programs experienced launch failures and delays and the cost of implementing missions increased substantially as a result of changes in mission scope increases in launch vehicle costs and or the lack of availability of a medium class launch vehicle under estimation of costs by the decadal survey and unfunded programmatic changes that were required by Congress and the Office of Management and Budget In addition the National Oceanic and Atmospheric Administration NOAA has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls Earth Science and Applications from Space A Midterm Assessment of NASA s Implementation of the Decadal Survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey The report also

highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space a key recommendation of the 2007 decadal survey that remains unfulfilled

Assessment of Impediments to Interagency Collaboration on Space and Earth Science Missions National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Assessment of Impediments to Interagency Cooperation on Space and Earth Science Missions, 2011-05-31 Through an examination of case studies agency briefings and existing reports and drawing on personal knowledge and direct experience the Committee on Assessment of Impediments to Interagency Cooperation on Space and Earth Science Missions found that candidate projects for multiagency collaboration in the development and implementation of Earth observing or space science missions are often intrinsically complex and therefore costly and that a multiagency approach to developing these missions typically results in additional complexity and cost Advocates of collaboration have sometimes underestimated the difficulties and associated costs and risks of dividing responsibility and accountability between two or more partners they also discount the possibility that collaboration will increase the risk in meeting performance objectives This committee's principal recommendation is that agencies should conduct Earth and space science projects independently unless It is judged that cooperation will result in significant added scientific value to the project over what could be achieved by a single agency alone or Unique capabilities reside within one agency that are necessary for the mission success of a project managed by another agency or The project is intended to transfer from research to operations necessitating a change in responsibility from one agency to another during the project or There are other compelling reasons to pursue collaboration for example a desire to build capacity at one of the cooperating agencies Even when the total project cost may increase parties may still find collaboration attractive if their share of a mission is more affordable than funding it alone In these cases alternatives to interdependent reliance on another government agency should be considered For example agencies may find that buying services from another agency or pursuing interagency coordination of spaceflight data collection is preferable to fully interdependent cooperation
